Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/compframe' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : frameEncode, frameDecode, frameRatio, frameSize, frameCompressed, frameRoundTrip.

'import "std/c/compframe"' · 'use compframe'

```
- `frameEncode(data list number) → list number`
- `frameDecode(encoded list number) → list number`
- `frameRatio(data list number) → number`
- `frameSize(data list number) → number`
- `frameCompressed(data list number) → number`
- `frameRoundTrip(data list number) → bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/compframe"
use compframe
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 frameEncode(data list number) → list•
 frameDecode(encoded list number) → list•
 frameRatio(data list number) → number•
 frameSize(data list number) → number•
 frameCompressed(data list number) → number•
 frameRoundTrip(data list number) → bool
```

4. Exemples d'utilisation

```
import "std/c/compframe"
use compframe
```

```
create result = frameEncode(/* args */)
say result
```

```
create result = frameDecode(/* args */)
say result
```

```
create result = frameRatio(/* args */)
say result
```

```
create result = frameSize(/* args */)
say result
```

```
create result = frameCompressed(/* args */)
say result
```

```
create result = frameRoundTrip(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/compframe"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module compframe

```
function frameEncode(data list number) returns list number
end
```

```
function frameDecode(encoded list number) returns list number
end
```

```
function frameRatio(data list number) returns number
end
```

```
function frameSize(data list number) returns number
end
```

```
function frameCompressed(data list number) returns number
end
```

```
function frameRoundTrip(data list number) returns bool
end
end
```

English

1. Overview

AFRILANG library ‘std/c/compframe‘ (tier complex, category complex). Exports 6 function(s): frameEncode, frameDecode, frameRatio, frameSize, frameCompressed, frameRoundTrip.

‘import ”std/c/compframe”‘ · ‘use compframe‘

```
- `frameEncode(data list number) → list number`
- `frameDecode(encoded list number) → list number`
- `frameRatio(data list number) → number`
- `frameSize(data list number) → number`
- `frameCompressed(data list number) → number`
- `frameRoundTrip(data list number) → bool`
```

2. Installation & import

Add the module to your program:

```
import "std/c/compframe"
use compframe
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 frameEncode(data list number) → list•
 frameDecode(encoded list number) → list•
 frameRatio(data list number) → number•
 frameSize(data list number) → number•
 frameCompressed(data list number) → number•
 frameRoundTrip(data list number) → bool
```

4. Usage examples

```
import "std/c/compframe"
use compframe
```

```
create result = frameEncode(/* args */)
say result
```

```
create result = frameDecode(/* args */)
say result
```

```
create result = frameRatio(/* args */)
say result
```

```
create result = frameSize(/* args */)
say result
```

```
create result = frameCompressed(/* args */)
say result
```

```
create result = frameRoundTrip(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/compframe"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module compframe

```
function frameEncode(data list number) returns list number
end
```

```
function frameDecode(encoded list number) returns list number
end
```

```
function frameRatio(data list number) returns number
end
```

```
function frameSize(data list number) returns number
end
```

```
function frameCompressed(data list number) returns number
end
```

```
function frameRoundTrip(data list number) returns bool
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/compframe"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/compframe/`

Source (extrait)

```
module compframe

function frameEncode(data list number) returns list number
end

function frameDecode(encoded list number) returns list number
end

function frameRatio(data list number) returns number
end

function frameSize(data list number) returns number
end

function frameCompressed(data list number) returns number
```

```
end

function frameRoundTrip(data list number) returns bool
end
end
```
