1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/siginterpolate' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : inteSum, inteMean, inteMin, inteMax, inteVar, inteStd, inteNorm.

'import "std/c/siginterpolate"' · 'use siginterpolate'

```
- `inteSum(v list number) → number`
- `inteMean(v list number) → number`
- `inteMin(v list number) → number`
- `inteMax(v list number) → number`
- `inteVar(v list number) → number`
- `inteStd(v list number) → number`
- `inteNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/siginterpolate"
use siginterpolate
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 inteSum(v list number) → number•
 inteMean(v list number) → number•
 inteMin(v list number) → number•
 inteMax(v list number) → number•
 inteVar(v list number) → number•
 inteStd(v list number) → number•
 inteNorm(v list number) → list
```

4. Exemples d'utilisation

```
import "std/c/siginterpolate"
use siginterpolate
```

```
create result = inteSum(/* args */)
say result
```

```
create result = inteMean(/* args */)
say result
```

```
create result = inteMin(/* args */)
say result
```

```
create result = inteMax(/* args */)
say result
```

```
create result = inteVar(/* args */)
say result
```

```
create result = inteStd(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/siginterpolate"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module siginterpolate

```
function inteSum(v list number) returns number
end
```

```
function inteMean(v list number) returns number
end
```

```
function inteMin(v list number) returns number
end
```

```
function inteMax(v list number) returns number
end
```

```
function inteVar(v list number) returns number
end
```

```
function inteStd(v list number) returns number
end
```

```
function inteNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/siginterpolate‘ (tier complex, category complex). Exports 7 function(s): inteSum, inteMean, inteMin, inteMax, inteVar, inteStd, inteNorm.
‘import ”std/c/siginterpolate”‘ · ‘use siginterpolate‘

```
- `inteSum(v list number) → number`
- `inteMean(v list number) → number`
- `inteMin(v list number) → number`
- `inteMax(v list number) → number`
- `inteVar(v list number) → number`
- `inteStd(v list number) → number`
- `inteNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/siginterpolate"
use siginterpolate
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 inteSum(v list number) → number•
 inteMean(v list number) → number•
 inteMin(v list number) → number•
 inteMax(v list number) → number•
 inteVar(v list number) → number•
 inteStd(v list number) → number•
 inteNorm(v list number) → list
```

4. Usage examples

```
import "std/c/siginterpolate"
use siginterpolate
```

```
create result = inteSum(/* args */)
say result
```

```
create result = inteMean(/* args */)
say result
```

```
create result = inteMin(/* args */)
say result
```

```
create result = inteMax(/* args */)
say result
```

```
create result = inteVar(/* args */)
say result
```

```
create result = inteStd(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/siginterpolate"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module siginterpolate

```
function inteSum(v list number) returns number
end
```

```
function inteMean(v list number) returns number
end
```

```
function inteMin(v list number) returns number
end
```

```
function inteMax(v list number) returns number
end
```

```
function inteVar(v list number) returns number
end
```

```
function inteStd(v list number) returns number
end
```

```
function inteNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/siginterpolate"`
- Vérification : `afrilang check`
- Documentation : https://afrilang.dev/stdlib/std/c/siginterpolate/

Source (extrait)

```
module siginterpolate

function inteSum(v list number) returns number
end

function inteMean(v list number) returns number
```

```
end

function inteMin(v list number) returns number
end

function inteMax(v list number) returns number
end

function inteVar(v list number) returns number
end

function inteStd(v list number) returns number
end

function inteNorm(v list number) returns list number
end
end
```
