AFRILANG Stdlib

std/m/physics2

Français. Bibliothèque AFRILANG ‘std/m/physics2‘ (niveau medium, catégorie medium). Elle expose 4 fonction(s) : kineticEnergy, potentialEnergy, momentum, force.
‘import ”std/m/physics2”‘ · ‘use physics2‘
- ‘kineticEnergy(mass number, velocity number) → number‘ - ‘potentialEnergy(mass number, height number) → number‘ - ‘momentum(mass number, velocity number) → number‘ - ‘force(mass number, accel number) → number‘ **English.** AFRILANG library ‘std/m/physics2‘

(tier medium, category medium). Exports 4 function(s): kineticEnergy, potentialEnergy, momentum, force.
‘import ”std/m/physics2”‘ · ‘use physics2‘
- ‘kineticEnergy(mass number, velocity number) → number‘ - ‘potentialEnergy(mass number, height number) → number‘ - ‘momentum(mass number, velocity number) → number‘ - ‘force(mass number, accel number) → number‘

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/m/physics2' (niveau medium, catégorie medium). Elle expose 4 fonction(s) : kineticEnergy, potentialEnergy, momentum, force.
'import "std/m/physics2"' · 'use physics2'

```
- `kineticEnergy(mass number, velocity number) → number`
- `potentialEnergy(mass number, height number) → number`
- `momentum(mass number, velocity number) → number`
- `force(mass number, accel number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/m/physics2"
use physics2
```

```
Niveau : medium · Catégorie : Modules medium (m/)
Bibliothèques intermédiaires — import std/m…/
```

3. Référence API

```
•
 kineticEnergy(mass number, velocity number) → number•
 potentialEnergy(mass number, height number) → number•
 momentum(mass number, velocity number) → number•
 force(mass number, accel number) → number
```

4. Exemples d'utilisation

```
import "std/m/physics2"
use physics2
```

```
create result = kineticEnergy(/* args */)
say result
```

```
create result = potentialEnergy(/* args */)
say result
```

```
create result = momentum(/* args */)
say result
```

```
create result = force(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/m/physics2"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module physics2

```
function kineticEnergy(mass number, velocity number) returns number
end
```

```
function potentialEnergy(mass number, height number) returns number
end
```

```
function momentum(mass number, velocity number) returns number
end
```

```
function force(mass number, accel number) returns number
end
end
```

English

1. Overview

AFRILANG library ‘std/m/physics2‘ (tier medium, category medium). Exports 4 function(s): kineticEnergy, potentialEnergy, momentum, force.

‘import ”std/m/physics2”‘ · ‘use physics2‘

```
- `kineticEnergy(mass number, velocity number) → number`
- `potentialEnergy(mass number, height number) → number`
- `momentum(mass number, velocity number) → number`
- `force(mass number, accel number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/m/physics2"
use physics2
```

```
Tier: medium · Category: Medium modules (m/)
Intermediate libraries — import std/m…/
```

3. API reference

```
•
 kineticEnergy(mass number, velocity number) → number•
 potentialEnergy(mass number, height number) → number•
 momentum(mass number, velocity number) → number•
 force(mass number, accel number) → number
```

4. Usage examples

```
import "std/m/physics2"
use physics2
```

```
create result = kineticEnergy(/* args */)
say result
```

```
create result = potentialEnergy(/* args */)
say result
```

```
create result = momentum(/* args */)
say result
```

```
create result = force(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/m/physics2"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module physics2

```
function kineticEnergy(mass number, velocity number) returns number
end
```

```
function potentialEnergy(mass number, height number) returns number
end
```

```
function momentum(mass number, velocity number) returns number
end
```

```
function force(mass number, accel number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/m/physics2"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/m/physics2/`

Source (extrait)

```
module physics2

function kineticEnergy(mass number, velocity number) returns number
end

function potentialEnergy(mass number, height number) returns number
end

function momentum(mass number, velocity number) returns number
end

function force(mass number, accel number) returns number
end
end
```
