1. Vue d’ensemble

Bibliothèque AFRILANG ‘std/c/finportfolio‘ (niveau complex, catégorie complex). Elle expose 7 fonction(s) : portSum, portMean, portMin, portMax, portVar, portStd, portNorm.

‘import ”std/c/finportfolio”‘ · ‘use finportfolio‘

```
- `portSum(v list number) → number`
- `portMean(v list number) → number`
- `portMin(v list number) → number`
- `portMax(v list number) → number`
- `portVar(v list number) → number`
- `portStd(v list number) → number`
- `portNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finportfolio"
use finportfolio
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 portSum(v list number) → number•
 portMean(v list number) → number•
 portMin(v list number) → number•
 portMax(v list number) → number•
 portVar(v list number) → number•
 portStd(v list number) → number•
 portNorm(v list number) → list
```

4. Exemples d’utilisation

```
import "std/c/finportfolio"
use finportfolio
```

```
create result = portSum(/* args */)
say result
```

```
create result = portMean(/* args */)
say result
```

```
create result = portMin(/* args */)
say result
```

```
create result = portMax(/* args */)
say result
```

```
create result = portVar(/* args */)
say result
```

```
create result = portStd(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/finportfolio"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module finportfolio

```
function portSum(v list number) returns number
end
```

```
function portMean(v list number) returns number
end
```

```
function portMin(v list number) returns number
end
```

```
function portMax(v list number) returns number
end
```

```
function portVar(v list number) returns number
end
```

```
function portStd(v list number) returns number
end
```

```
function portNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/finportfolio‘ (tier complex, category complex). Exports 7 function(s): portSum, portMean, portMin, portMax, portVar, portStd, portNorm.
‘import ”std/c/finportfolio”‘ · ‘use finportfolio‘

```
- `portSum(v list number) → number`
- `portMean(v list number) → number`
- `portMin(v list number) → number`
- `portMax(v list number) → number`
- `portVar(v list number) → number`
- `portStd(v list number) → number`
- `portNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finportfolio"
use finportfolio
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 portSum(v list number) → number•
 portMean(v list number) → number•
 portMin(v list number) → number•
 portMax(v list number) → number•
 portVar(v list number) → number•
 portStd(v list number) → number•
 portNorm(v list number) → list
```

4. Usage examples

```
import "std/c/finportfolio"
use finportfolio
```

```
create result = portSum(/* args */)
say result
```

```
create result = portMean(/* args */)
say result
```

```
create result = portMin(/* args */)
say result
```

```
create result = portMax(/* args */)
say result
```

```
create result = portVar(/* args */)
say result
```

```
create result = portStd(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/finportfolio"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module finportfolio

```
function portSum(v list number) returns number
end
```

```
function portMean(v list number) returns number
end
```

```
function portMin(v list number) returns number
end
```

```
function portMax(v list number) returns number
end
```

```
function portVar(v list number) returns number
end
```

```
function portStd(v list number) returns number
end
```

```
function portNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/finportfolio"`
- Vérification : `afrilang check`
- Documentation : https://afrilang.dev/stdlib/std/c/finportfolio/

Source (extrait)

```
module finportfolio

function portSum(v list number) returns number
end

function portMean(v list number) returns number
```

```
end

function portMin(v list number) returns number
end

function portMax(v list number) returns number
end

function portVar(v list number) returns number
end

function portStd(v list number) returns number
end

function portNorm(v list number) returns list number
end
end
```
