1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/sigpoly' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : polySum, polyMean, polyMin, polyMax, polyVar, polyStd, polyNorm.

'import "std/c/sigpoly"' · 'use sigpoly'

```
- `polySum(v list number) → number`
- `polyMean(v list number) → number`
- `polyMin(v list number) → number`
- `polyMax(v list number) → number`
- `polyVar(v list number) → number`
- `polyStd(v list number) → number`
- `polyNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/sigpoly"
use sigpoly
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 polySum(v list number) → number•
 polyMean(v list number) → number•
 polyMin(v list number) → number•
 polyMax(v list number) → number•
 polyVar(v list number) → number•
 polyStd(v list number) → number•
 polyNorm(v list number) → list
```

4. Exemples d'utilisation

```
import "std/c/sigpoly"
use sigpoly
```

```
create result = polySum(/* args */)
say result
```

```
create result = polyMean(/* args */)
say result
```

```
create result = polyMin(/* args */)
say result
```

```
create result = polyMax(/* args */)
say result
```

```
create result = polyVar(/* args */)
say result
```

```
create result = polyStd(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/sigpoly"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module sigpoly

```
function polySum(v list number) returns number
end
```

```
function polyMean(v list number) returns number
end
```

```
function polyMin(v list number) returns number
end
```

```
function polyMax(v list number) returns number
end
```

```
function polyVar(v list number) returns number
end
```

```
function polyStd(v list number) returns number
end
```

```
function polyNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/sigpoly‘ (tier complex, category complex). Exports 7 function(s): polySum, polyMean, polyMin, polyMax, polyVar, polyStd, polyNorm.
‘import ”std/c/sigpoly”‘ · ‘use sigpoly‘

```
- `polySum(v list number) → number`
- `polyMean(v list number) → number`
- `polyMin(v list number) → number`
- `polyMax(v list number) → number`
- `polyVar(v list number) → number`
- `polyStd(v list number) → number`
- `polyNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/sigpoly"
use sigpoly
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 polySum(v list number) → number•
 polyMean(v list number) → number•
 polyMin(v list number) → number•
 polyMax(v list number) → number•
 polyVar(v list number) → number•
 polyStd(v list number) → number•
 polyNorm(v list number) → list
```

4. Usage examples

```
import "std/c/sigpoly"
use sigpoly
```

```
create result = polySum(/* args */)
say result
```

```
create result = polyMean(/* args */)
say result
```

```
create result = polyMin(/* args */)
say result
```

```
create result = polyMax(/* args */)
say result
```

```
create result = polyVar(/* args */)
say result
```

```
create result = polyStd(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/sigpoly"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module sigpoly

```
function polySum(v list number) returns number
end
```

```
function polyMean(v list number) returns number
end
```

```
function polyMin(v list number) returns number
end
```

```
function polyMax(v list number) returns number
end
```

```
function polyVar(v list number) returns number
end
```

```
function polyStd(v list number) returns number
end
```

```
function polyNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/sigpoly"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/sigpoly/`

Source (extrait)

```
module sigpoly

function polySum(v list number) returns number
end

function polyMean(v list number) returns number
```

```
end

function polyMin(v list number) returns number
end

function polyMax(v list number) returns number
end

function polyVar(v list number) returns number
end

function polyStd(v list number) returns number
end

function polyNorm(v list number) returns list number
end
end
```
