AFRILANG Stdlib

std/c/cryptscrypt

Bibliothèque AFRILANG `std/c/cryptscrypt` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : scryLen, scry

`import "std/c/cryptscrypt"` · `use cryptscrypt`

- `scryLen(s text) ? number`
- `scryUpper(s text) ? text`
- `scryLower(s text) ? text`
- `scryTrim(s text) ? text`
- `scrySplit(s text, delim text) ? list text`
- `scryJoin(parts list text, delim text) ? text`
- `scryReplace(s text, from text, to text) ? text`
- `hash32(s text) ? number`

Category: complex | Tier: complex | Functions: 8

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/cryptscrypt` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : scryLen, scry

`import "std/c/cryptscrypt"` · `use cryptscrypt`

- `scryLen(s text) ? number`
- `scryUpper(s text) ? text`
- `scryLower(s text) ? text`
- `scryTrim(s text) ? text`
- `scrySplit(s text, delim text) ? list text`
- `scryJoin(parts list text, delim text) ? text`
- `scryReplace(s text, from text, to text) ? text`
- `hash32(s text) ? number`

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/cryptscrypt"
use cryptscrypt
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

? scryLen(s text) ? number
? scryUpper(s text) ? text
? scryLower(s text) ? text
? scryTrim(s text) ? text
? scrySplit(s text, delim text) ? list
? scryJoin(parts list text, delim text) ? text
? scryReplace(s text, from text, to text) ? text
? hash32(s text) ? number

4. Exemples d'utilisation

```
import "std/c/cryptscrypt"
use cryptscrypt

create result = scryLen(/* args */)
say result

create result = scryUpper(/* args */)
say result

create result = scryLower(/* args */)
say result

create result = scryTrim(/* args */)
say result

create result = scrySplit(/* args */)
say result

create result = scryJoin(/* args */)
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/cryptscrypt"` en tête de fichier.
? Lancez `afrilang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module cryptscrypt

function scryLen(s text) returns number
end

function scryUpper(s text) returns text
end

function scryLower(s text) returns text
end

function scryTrim(s text) returns text
end

function scrySplit(s text, delim text) returns list text
end

function scryJoin(parts list text, delim text) returns text
end

function scryReplace(s text, from text, to text) returns text
end

function hash32(s text) returns number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/cryptscrypt` (tier complex, category complex). Exports 8 function(s): scryLen, scryUpper, scryLo

`import "std/c/cryptscrypt"` · `use cryptscrypt`

- `scryLen(s text) ? number`
- `scryUpper(s text) ? text`
- `scryLower(s text) ? text`
- `scryTrim(s text) ? text`
- `scrySplit(s text, delim text) ? list text`
- `scryJoin(parts list text, delim text) ? text`
- `scryReplace(s text, from text, to text) ? text`
- `hash32(s text) ? number`

2. Installation & import

Add the module to your program:

```
import "std/c/cryptscrypt"
use cryptscrypt
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

? scryLen(s text) ? number
? scryUpper(s text) ? text
? scryLower(s text) ? text
? scryTrim(s text) ? text
? scrySplit(s text, delim text) ? list
? scryJoin(parts list text, delim text) ? text
? scryReplace(s text, from text, to text) ? text
? hash32(s text) ? number

4. Usage examples

```
import "std/c/cryptscrypt"
use cryptscrypt

create result = scryLen(/* args */)
say result

create result = scryUpper(/* args */)
say result

create result = scryLower(/* args */)
say result

create result = scryTrim(/* args */)
say result

create result = scrySplit(/* args */)
say result

create result = scryJoin(/* args */)
say result
```

5. Best practices

? Prefer `import "std/c/cryptscrypt"` at the top of your file.
? Run `afrilang check` before shipping.
? Combine with related stdlib modules from the same category.
? See /stdlib/ for the live source and playground demos.
? Report issues on GitHub if an export is missing or undocumented.

6. Appendix ? source

```
module cryptscrypt

function scryLen(s text) returns number
end

function scryUpper(s text) returns text
end

function scryLower(s text) returns text
end

function scryTrim(s text) returns text
end

function scrySplit(s text, delim text) returns list text
end

function scryJoin(parts list text, delim text) returns text
end

function scryReplace(s text, from text, to text) returns text
end

function hash32(s text) returns number
end
end
```
