## 1. Vue d'ensemble

Bibliothèque AFRILANG ‘std/triangle‘ (niveau simple, catégorie math). Elle expose 2 fonction(s) : areaBaseHeight, heron.

‘import ”std/triangle”‘ · ‘use triangle‘

```
- `areaBaseHeight(b number, h number) → number`
- `heron(a number, b number, c number) → number`
```

## 2. Installation & import

Ajoutez le module à votre programme :

```
import "std/triangle"
use triangle
```

```
Niveau : simple · Catégorie : Mathématiques
Arithmétique, trigonométrie, statistiques, conversions.
```

## 3. Référence API

```
•
 areaBaseHeight(b number, h number) → number•
 heron(a number, b number, c number) → number
```

## 4. Exemples d'utilisation

```
import "std/triangle"
use triangle
```

```
create result = areaBaseHeight(/* args */)
say result
```

```
create result = heron(/* args */)
say result
```

## 5. Bonnes pratiques

```
•
 Préférez `import "std/triangle"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

## 6. Annexe — source

module triangle

```
function areaBaseHeight(b number, h number) returns number
end
```

```
function heron(a number, b number, c number) returns number
end
end
```

# English

## 1. Overview

AFRILANG library ‘std/triangle‘ (tier simple, category math). Exports 2 function(s): areaBaseHeight, heron.
‘import ”std/triangle”‘ · ‘use triangle‘

```
- `areaBaseHeight(b number, h number) → number`
- `heron(a number, b number, c number) → number`
```

## 2. Installation & import

Add the module to your program:

```
import "std/triangle"
use triangle
```

```
Tier: simple · Category: Mathematics
Arithmetic, trigonometry, statistics, conversions.
```

## 3. API reference

```
•
 areaBaseHeight(b number, h number) → number•
 heron(a number, b number, c number) → number
```

## 4. Usage examples

```
import "std/triangle"
use triangle
```

```
create result = areaBaseHeight(/* args */)
say result
```

```
create result = heron(/* args */)
say result
```

## 5. Best practices

```
•
 Prefer `import "std/triangle"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

## 6. Appendix — source

module triangle

```
function areaBaseHeight(b number, h number) returns number
end
```

```
function heron(a number, b number, c number) returns number
end
end
```

## Référence rapide / Quick reference

- Import : `import "std/triangle"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/triangle/`

## Source (extrait)

```
module triangle

function areaBaseHeight(b number, h number) returns number
end

function heron(a number, b number, c number) returns number
end
end
```
