1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/csvfilter' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : filtSum, filtMean, filtMin, filtMax, filtVar, filtStd, filtNorm, filterGt.

'import "std/c/csvfilter"' · 'use csvfilter'

```
- `filtSum(v list number) → number`
- `filtMean(v list number) → number`
- `filtMin(v list number) → number`
- `filtMax(v list number) → number`
- `filtVar(v list number) → number`
- `filtStd(v list number) → number`
- `filtNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvfilter"
use csvfilter
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 filtSum(v list number) → number•
 filtMean(v list number) → number•
 filtMin(v list number) → number•
 filtMax(v list number) → number•
 filtVar(v list number) → number•
 filtStd(v list number) → number•
 filtNorm(v list number) → list•
 filterGt(col list number, threshold number) → list
```

4. Exemples d'utilisation

```
import "std/c/csvfilter"
use csvfilter
```

```
create result = filtSum(/* args */)
say result
```

```
create result = filtMean(/* args */)
say result
```

```
create result = filtMin(/* args */)
say result
```

```
create result = filtMax(/* args */)
say result
```

```
create result = filtVar(/* args */)
say result
```

```
create result = filtStd(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/csvfilter"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module csvfilter

```
function filtSum(v list number) returns number
end
```

```
function filtMean(v list number) returns number
end
```

```
function filtMin(v list number) returns number
end
```

```
function filtMax(v list number) returns number
end
```

```
function filtVar(v list number) returns number
end
```

```
function filtStd(v list number) returns number
end
```

```
function filtNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/csvfilter‘ (tier complex, category complex). Exports 8 function(s): filtSum, filtMean, filtMin, filtMax, filtVar, filtStd, filtNorm, filterGt.

‘import ”std/c/csvfilter”‘ · ‘use csvfilter‘

```
- `filtSum(v list number) → number`
- `filtMean(v list number) → number`
- `filtMin(v list number) → number`
- `filtMax(v list number) → number`
- `filtVar(v list number) → number`
- `filtStd(v list number) → number`
- `filtNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvfilter"
use csvfilter
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 filtSum(v list number) → number•
 filtMean(v list number) → number•
 filtMin(v list number) → number•
 filtMax(v list number) → number•
 filtVar(v list number) → number•
 filtStd(v list number) → number•
 filtNorm(v list number) → list•
 filterGt(col list number, threshold number) → list
```

4. Usage examples

```
import "std/c/csvfilter"
use csvfilter
```

```
create result = filtSum(/* args */)
say result
```

```
create result = filtMean(/* args */)
say result
```

```
create result = filtMin(/* args */)
say result
```

```
create result = filtMax(/* args */)
say result
```

```
create result = filtVar(/* args */)
say result
```

```
create result = filtStd(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/csvfilter"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module csvfilter

```
function filtSum(v list number) returns number
end
```

```
function filtMean(v list number) returns number
end
```

```
function filtMin(v list number) returns number
end
```

```
function filtMax(v list number) returns number
end
```

```
function filtVar(v list number) returns number
end
```

```
function filtStd(v list number) returns number
end
```

```
function filtNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/csvfilter"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/csvfilter/`

Source (extrait)

```
module csvfilter

function filtSum(v list number) returns number
end

function filtMean(v list number) returns number
end

function filtMin(v list number) returns number
end

function filtMax(v list number) returns number
end

function filtVar(v list number) returns number
end

function filtStd(v list number) returns number
end

function filtNorm(v list number) returns list number
end

function filterGt(col list number, threshold number) returns list number
end
end
```
