AFRILANG Stdlib

std/c/geomclip

Bibliothèque AFRILANG `std/c/geomclip` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : clipSum, clipMea

`import "std/c/geomclip"` · `use geomclip`

- `clipSum(v list number) ? number`
- `clipMean(v list number) ? number`
- `clipMin(v list number) ? number`
- `clipMax(v list number) ? number`
- `clipVar(v list number) ? number`
- `clipStd(v list number) ? number`
- `clipNorm(v list number) ? list number`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/geomclip` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : clipSum, clipMea

`import "std/c/geomclip"` · `use geomclip`

- `clipSum(v list number) ? number`
- `clipMean(v list number) ? number`
- `clipMin(v list number) ? number`
- `clipMax(v list number) ? number`
- `clipVar(v list number) ? number`
- `clipStd(v list number) ? number`
- `clipNorm(v list number) ? list number`

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/geomclip"
use geomclip
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

? clipSum(v list number) ? number
? clipMean(v list number) ? number
? clipMin(v list number) ? number
? clipMax(v list number) ? number
? clipVar(v list number) ? number
? clipStd(v list number) ? number
? clipNorm(v list number) ? list

4. Exemples d'utilisation

```
import "std/c/geomclip"
use geomclip

create result = clipSum(/* args */)
say result

create result = clipMean(/* args */)
say result

create result = clipMin(/* args */)
say result

create result = clipMax(/* args */)
say result

create result = clipVar(/* args */)
say result

create result = clipStd(/* args */)
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/geomclip"` en tête de fichier.
? Lancez `afrilang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module geomclip
```

```
function clipSum(v list number) returns number
end
function clipMean(v list number) returns number
end
function clipMin(v list number) returns number
end
function clipMax(v list number) returns number
end
function clipVar(v list number) returns number
end
function clipStd(v list number) returns number
end
function clipNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/geomclip` (tier complex, category complex). Exports 7 function(s): clipSum, clipMean, clipMin, c

`import "std/c/geomclip"` · `use geomclip`

- `clipSum(v list number) ? number`
- `clipMean(v list number) ? number`
- `clipMin(v list number) ? number`
- `clipMax(v list number) ? number`
- `clipVar(v list number) ? number`
- `clipStd(v list number) ? number`
- `clipNorm(v list number) ? list number`

2. Installation & import

Add the module to your program:

```
import "std/c/geomclip"
use geomclip
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

? clipSum(v list number) ? number
? clipMean(v list number) ? number
? clipMin(v list number) ? number
? clipMax(v list number) ? number
? clipVar(v list number) ? number
? clipStd(v list number) ? number
? clipNorm(v list number) ? list

4. Usage examples

```
import "std/c/geomclip"
use geomclip

create result = clipSum(/* args */)
say result

create result = clipMean(/* args */)
say result

create result = clipMin(/* args */)
say result

create result = clipMax(/* args */)
say result

create result = clipVar(/* args */)
say result

create result = clipStd(/* args */)
say result
```

5. Best practices

? Prefer `import "std/c/geomclip"` at the top of your file.
? Run `afrilang check` before shipping.
? Combine with related stdlib modules from the same category.
? See /stdlib/ for the live source and playground demos.
? Report issues on GitHub if an export is missing or undocumented.

6. Appendix ? source

```
module geomclip
```

```
function clipSum(v list number) returns number
end

function clipMean(v list number) returns number
end

function clipMin(v list number) returns number
end

function clipMax(v list number) returns number
end

function clipVar(v list number) returns number
end

function clipStd(v list number) returns number
end

function clipNorm(v list number) returns list number
end
end
```
