AFRILANG Stdlib

std/m/listcorr

Français. Bibliothèque AFRILANG ‘std/m/listcorr‘ (niveau medium, catégorie medium). Elle expose 4 fonction(s) : covariance, correlation, dotProduct, euclidean.
‘import ”std/m/listcorr”‘ · ‘use listcorr‘
- ‘covariance(a list number, b list number) → number‘ - ‘correlation(a list number, b list number) → number‘ - ‘dotProduct(a list number, b list number) → number‘ - ‘euclidean(a list number, b list number) → number‘ **English.** AFRILANG library ‘std/m/listcorr‘ (tier medium, category medium). Exports 4 function(s): covariance, correlation, dotProduct, euclidean.
‘import ”std/m/listcorr”‘ · ‘use listcorr‘
- ‘covariance(a list number, b list number) → number‘ - ‘correlation(a list number, b list number) → number‘ - ‘dotProduct(a list number, b list number) → number‘ - ‘euclidean(a list number, b list number) → number‘

1. Vue d'ensemble

Bibliothèque AFRILANG ‘std/m/listcorr‘ (niveau medium, catégorie medium). Elle expose 4 fonction(s) : covariance, correlation, dotProduct, euclidean.
‘import ”std/m/listcorr”‘ · ‘use listcorr‘

```
- `covariance(a list number, b list number) → number`
- `correlation(a list number, b list number) → number`
- `dotProduct(a list number, b list number) → number`
- `euclidean(a list number, b list number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/m/listcorr"
use listcorr
```

```
Niveau : medium · Catégorie : Modules medium (m/)
Bibliothèques intermédiaires — import std/m…/
```

3. Référence API

```
•
 covariance(a list number, b list number) → number•
 correlation(a list number, b list number) → number•
 dotProduct(a list number, b list number) → number•
 euclidean(a list number, b list number) → number
```

4. Exemples d'utilisation

```
import "std/m/listcorr"
use listcorr
```

```
create result = covariance(/* args */)
say result
```

```
create result = correlation(/* args */)
say result
```

```
create result = dotProduct(/* args */)
say result
```

```
create result = euclidean(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/m/listcorr"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module listcorr

```
function covariance(a list number, b list number) returns number
end
```

```
function correlation(a list number, b list number) returns number
end
```

```
function dotProduct(a list number, b list number) returns number
end
```

```
function euclidean(a list number, b list number) returns number
end
end
```

English

1. Overview

AFRILANG library ‘std/m/listcorr‘ (tier medium, category medium). Exports 4 function(s): covariance, correlation, dotProduct, euclidean.

‘import ”std/m/listcorr”‘ · ‘use listcorr‘

```
- `covariance(a list number, b list number) → number`
- `correlation(a list number, b list number) → number`
- `dotProduct(a list number, b list number) → number`
- `euclidean(a list number, b list number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/m/listcorr"
use listcorr
```

```
Tier: medium · Category: Medium modules (m/)
Intermediate libraries — import std/m…/
```

3. API reference

```
•
 covariance(a list number, b list number) → number•
 correlation(a list number, b list number) → number•
 dotProduct(a list number, b list number) → number•
 euclidean(a list number, b list number) → number
```

4. Usage examples

```
import "std/m/listcorr"
use listcorr
```

```
create result = covariance(/* args */)
say result
```

```
create result = correlation(/* args */)
say result
```

```
create result = dotProduct(/* args */)
say result
```

```
create result = euclidean(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/m/listcorr"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module listcorr

```
function covariance(a list number, b list number) returns number
end
```

```
function correlation(a list number, b list number) returns number
end
```

```
function dotProduct(a list number, b list number) returns number
end
```

```
function euclidean(a list number, b list number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/m/listcorr"`
- Vérification : `afrilang check`
- Documentation : https://afrilang.dev/stdlib/std/m/listcorr/

Source (extrait)

```
module listcorr

function covariance(a list number, b list number) returns number
end

function correlation(a list number, b list number) returns number
end

function dotProduct(a list number, b list number) returns number
end

function euclidean(a list number, b list number) returns number
end
end
```
