1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/compvarint' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : varintEncode, varintDecode, varintRatio, varintSize, varintCompressed, varintRoundTrip.

'import "std/c/compvarint"' · 'use compvarint'

```
- `varintEncode(data list number) → list number`
- `varintDecode(encoded list number) → list number`
- `varintRatio(data list number) → number`
- `varintSize(data list number) → number`
- `varintCompressed(data list number) → number`
- `varintRoundTrip(data list number) → bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/compvarint"
use compvarint
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 varintEncode(data list number) → list•
 varintDecode(encoded list number) → list•
 varintRatio(data list number) → number•
 varintSize(data list number) → number•
 varintCompressed(data list number) → number•
 varintRoundTrip(data list number) → bool
```

4. Exemples d'utilisation

```
import "std/c/compvarint"
use compvarint
```

```
create result = varintEncode(/* args */)
say result
```

```
create result = varintDecode(/* args */)
say result
```

```
create result = varintRatio(/* args */)
say result
```

```
create result = varintSize(/* args */)
say result
```

```
create result = varintCompressed(/* args */)
say result
```

```
create result = varintRoundTrip(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/compvarint"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module compvarint

```
function varintEncode(data list number) returns list number
end
```

```
function varintDecode(encoded list number) returns list number
end
```

```
function varintRatio(data list number) returns number
end
```

```
function varintSize(data list number) returns number
end
```

```
function varintCompressed(data list number) returns number
end
```

```
function varintRoundTrip(data list number) returns bool
end
end
```

English

1. Overview

AFRILANG library ‘std/c/compvarint‘ (tier complex, category complex). Exports 6 function(s): varintEncode, varintDecode, varintRatio, varintSize, varintCompressed, varintRoundTrip.

‘import ”std/c/compvarint”‘ · ‘use compvarint‘

```
- `varintEncode(data list number) → list number`
- `varintDecode(encoded list number) → list number`
- `varintRatio(data list number) → number`
- `varintSize(data list number) → number`
- `varintCompressed(data list number) → number`
- `varintRoundTrip(data list number) → bool`
```

2. Installation & import

Add the module to your program:

```
import "std/c/compvarint"
use compvarint
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 varintEncode(data list number) → list•
 varintDecode(encoded list number) → list•
 varintRatio(data list number) → number•
 varintSize(data list number) → number•
 varintCompressed(data list number) → number•
 varintRoundTrip(data list number) → bool
```

4. Usage examples

```
import "std/c/compvarint"
use compvarint
```

```
create result = varintEncode(/* args */)
say result
```

```
create result = varintDecode(/* args */)
say result
```

```
create result = varintRatio(/* args */)
say result
```

```
create result = varintSize(/* args */)
say result
```

```
create result = varintCompressed(/* args */)
say result
```

```
create result = varintRoundTrip(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/compvarint"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module compvarint

```
function varintEncode(data list number) returns list number
end
```

```
function varintDecode(encoded list number) returns list number
end
```

```
function varintRatio(data list number) returns number
end
```

```
function varintSize(data list number) returns number
end
```

```
function varintCompressed(data list number) returns number
end
```

```
function varintRoundTrip(data list number) returns bool
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/compvarint"`
- Vérification : `afrilang check`
- Documentation : https://afrilang.dev/stdlib/std/c/compvarint/

Source (extrait)

```
module compvarint

function varintEncode(data list number) returns list number
end

function varintDecode(encoded list number) returns list number
end

function varintRatio(data list number) returns number
end

function varintSize(data list number) returns number
end

function varintCompressed(data list number) returns number
```

```
end

function varintRoundTrip(data list number) returns bool
end
end
```
