1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/csvselect' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : seleSum, seleMean, seleMin, seleMax, seleVar, seleStd, seleNorm, filterGt.

'import "std/c/csvselect"' · 'use csvselect'

```
- `seleSum(v list number) → number`
- `seleMean(v list number) → number`
- `seleMin(v list number) → number`
- `seleMax(v list number) → number`
- `seleVar(v list number) → number`
- `seleStd(v list number) → number`
- `seleNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvselect"
use csvselect
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 seleSum(v list number) → number•
 seleMean(v list number) → number•
 seleMin(v list number) → number•
 seleMax(v list number) → number•
 seleVar(v list number) → number•
 seleStd(v list number) → number•
 seleNorm(v list number) → list•
 filterGt(col list number, threshold number) → list
```

4. Exemples d'utilisation

```
import "std/c/csvselect"
use csvselect
```

```
create result = seleSum(/* args */)
say result
```

```
create result = seleMean(/* args */)
say result
```

```
create result = seleMin(/* args */)
say result
```

```
create result = seleMax(/* args */)
say result
```

```
create result = seleVar(/* args */)
say result
```

```
create result = seleStd(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/csvselect"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module csvselect

```
function seleSum(v list number) returns number
end
```

```
function seleMean(v list number) returns number
end
```

```
function seleMin(v list number) returns number
end
```

```
function seleMax(v list number) returns number
end
```

```
function seleVar(v list number) returns number
end
```

```
function seleStd(v list number) returns number
end
```

```
function seleNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/csvselect‘ (tier complex, category complex). Exports 8 function(s): seleSum, seleMean, seleMin, seleMax, seleVar, seleStd, seleNorm, filterGt.

‘import ”std/c/csvselect”‘ · ‘use csvselect‘

```
- `seleSum(v list number) → number`
- `seleMean(v list number) → number`
- `seleMin(v list number) → number`
- `seleMax(v list number) → number`
- `seleVar(v list number) → number`
- `seleStd(v list number) → number`
- `seleNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvselect"
use csvselect
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 seleSum(v list number) → number•
 seleMean(v list number) → number•
 seleMin(v list number) → number•
 seleMax(v list number) → number•
 seleVar(v list number) → number•
 seleStd(v list number) → number•
 seleNorm(v list number) → list•
 filterGt(col list number, threshold number) → list
```

4. Usage examples

```
import "std/c/csvselect"
use csvselect
```

```
create result = seleSum(/* args */)
say result
```

```
create result = seleMean(/* args */)
say result
```

```
create result = seleMin(/* args */)
say result
```

```
create result = seleMax(/* args */)
say result
```

```
create result = seleVar(/* args */)
say result
```

```
create result = seleStd(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/csvselect"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module csvselect

```
function seleSum(v list number) returns number
end
```

```
function seleMean(v list number) returns number
end
```

```
function seleMin(v list number) returns number
end
```

```
function seleMax(v list number) returns number
end
```

```
function seleVar(v list number) returns number
end
```

```
function seleStd(v list number) returns number
end
```

```
function seleNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/csvselect"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/csvselect/`

Source (extrait)

```
module csvselect

function seleSum(v list number) returns number
end

function seleMean(v list number) returns number
end

function seleMin(v list number) returns number
end

function seleMax(v list number) returns number
end

function seleVar(v list number) returns number
end

function seleStd(v list number) returns number
end

function seleNorm(v list number) returns list number
end

function filterGt(col list number, threshold number) returns list number
end
end
```
