Français

1. Vue d’ensemble

Bibliothèque AFRILANG ‘std/c/netport‘ (niveau complex, catégorie complex). Elle expose 7 fonction(s) : portLen, portUpper, portLower, portTrim, portSplit, portJoin, portReplace.

‘import ”std/c/netport”‘ · ‘use netport‘

```
- `portLen(s text) → number`
- `portUpper(s text) → text`
- `portLower(s text) → text`
- `portTrim(s text) → text`
- `portSplit(s text, delim text) → list text`
- `portJoin(parts list text, delim text) → text`
- `portReplace(s text, from text, to text) → text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/netport"
use netport
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 portLen(s text) → number•
 portUpper(s text) → text•
 portLower(s text) → text•
 portTrim(s text) → text•
 portSplit(s text, delim text) → list•
 portJoin(parts list text, delim text) → text•
 portReplace(s text, from text, to text) → text
```

4. Exemples d’utilisation

```
import "std/c/netport"
use netport
```

```
create result = portLen(/* args */)
say result
```

```
create result = portUpper(/* args */)
say result
```

```
create result = portLower(/* args */)
say result
```

```
create result = portTrim(/* args */)
say result
```

```
create result = portSplit(/* args */)
say result
```

```
create result = portJoin(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/netport"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module netport

```
function portLen(s text) returns number
end
```

```
function portUpper(s text) returns text
end
```

```
function portLower(s text) returns text
end
```

```
function portTrim(s text) returns text
end
```

```
function portSplit(s text, delim text) returns list text
end
```

```
function portJoin(parts list text, delim text) returns text
end
```

```
function portReplace(s text, from text, to text) returns text
end
end
```

English

1. Overview

AFRILANG library ‘std/c/netport‘ (tier complex, category complex). Exports 7 function(s): portLen, portUpper, portLower, portTrim, portSplit, portJoin, portReplace.
‘import ”std/c/netport”‘ · ‘use netport‘

```
- `portLen(s text) → number`
- `portUpper(s text) → text`
- `portLower(s text) → text`
- `portTrim(s text) → text`
- `portSplit(s text, delim text) → list text`
- `portJoin(parts list text, delim text) → text`
- `portReplace(s text, from text, to text) → text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/netport"
use netport
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 portLen(s text) → number•
 portUpper(s text) → text•
 portLower(s text) → text•
 portTrim(s text) → text•
 portSplit(s text, delim text) → list•
 portJoin(parts list text, delim text) → text•
 portReplace(s text, from text, to text) → text
```

4. Usage examples

```
import "std/c/netport"
use netport
```

```
create result = portLen(/* args */)
say result
```

```
create result = portUpper(/* args */)
say result
```

```
create result = portLower(/* args */)
say result
```

```
create result = portTrim(/* args */)
say result
```

```
create result = portSplit(/* args */)
say result
```

```
create result = portJoin(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/netport"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module netport

```
function portLen(s text) returns number
end
```

```
function portUpper(s text) returns text
end
```

```
function portLower(s text) returns text
end
```

```
function portTrim(s text) returns text
end
```

```
function portSplit(s text, delim text) returns list text
end
```

```
function portJoin(parts list text, delim text) returns text
end
```

```
function portReplace(s text, from text, to text) returns text
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/netport"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/netport/`

Source (extrait)

```
module netport

function portLen(s text) returns number
end

function portUpper(s text) returns text
```

```
end

function portLower(s text) returns text
end

function portTrim(s text) returns text
end

function portSplit(s text, delim text) returns list text
end

function portJoin(parts list text, delim text) returns text
end

function portReplace(s text, from text, to text) returns text
end
end
```
