1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/graphmst' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : mstWeightPrim, mstWeightKruskal, mstEdges, compareMstAlgos, forestMstWeight, isConnectedForMst.

'import "std/c/graphmst"' · 'use graphmst'

```
- `mstWeightPrim(adj list number, n number) → number`
- `mstWeightKruskal(adj list number, n number) → number`
- `mstEdges(adj list number, n number) → number`
- `compareMstAlgos(adj list number, n number) → number`
- `forestMstWeight(adj list number, n number) → number`
- `isConnectedForMst(adj list number, n number) → bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/graphmst"
use graphmst
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 mstWeightPrim(adj list number, n number) → number•
 mstWeightKruskal(adj list number, n number) → number•
 mstEdges(adj list number, n number) → number•
 compareMstAlgos(adj list number, n number) → number•
 forestMstWeight(adj list number, n number) → number•
 isConnectedForMst(adj list number, n number) → bool
```

4. Exemples d'utilisation

```
import "std/c/graphmst"
use graphmst
```

```
create result = mstWeightPrim(/* args */)
say result
```

```
create result = mstWeightKruskal(/* args */)
say result
```

```
create result = mstEdges(/* args */)
say result
```

```
create result = compareMstAlgos(/* args */)
say result
```

```
create result = forestMstWeight(/* args */)
say result
```

```
create result = isConnectedForMst(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/graphmst"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module graphmst

```
function mstWeightPrim(adj list number, n number) returns number
end
```

```
function mstWeightKruskal(adj list number, n number) returns number
end
```

```
function mstEdges(adj list number, n number) returns number
end
```

```
function compareMstAlgos(adj list number, n number) returns number
end
```

```
function forestMstWeight(adj list number, n number) returns number
end
```

```
function isConnectedForMst(adj list number, n number) returns bool
end
end
```

English

1. Overview

AFRILANG library ‘std/c/graphmst‘ (tier complex, category complex). Exports 6 function(s): mstWeightPrim, mstWeightKruskal, mstEdges, compareMstAlgos, forestMstWeight, isConnectedForMst.

‘import ”std/c/graphmst”‘ · ‘use graphmst‘

```
- `mstWeightPrim(adj list number, n number) → number`
- `mstWeightKruskal(adj list number, n number) → number`
- `mstEdges(adj list number, n number) → number`
- `compareMstAlgos(adj list number, n number) → number`
- `forestMstWeight(adj list number, n number) → number`
- `isConnectedForMst(adj list number, n number) → bool`
```

2. Installation & import

Add the module to your program:

```
import "std/c/graphmst"
use graphmst
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 mstWeightPrim(adj list number, n number) → number•
 mstWeightKruskal(adj list number, n number) → number•
 mstEdges(adj list number, n number) → number•
 compareMstAlgos(adj list number, n number) → number•
 forestMstWeight(adj list number, n number) → number•
 isConnectedForMst(adj list number, n number) → bool
```

4. Usage examples

```
import "std/c/graphmst"
use graphmst
```

```
create result = mstWeightPrim(/* args */)
say result
```

```
create result = mstWeightKruskal(/* args */)
say result
```

```
create result = mstEdges(/* args */)
say result
```

```
create result = compareMstAlgos(/* args */)
say result
```

```
create result = forestMstWeight(/* args */)
say result
```

```
create result = isConnectedForMst(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/graphmst"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module graphmst

```
function mstWeightPrim(adj list number, n number) returns number
end
```

```
function mstWeightKruskal(adj list number, n number) returns number
end
```

```
function mstEdges(adj list number, n number) returns number
end
```

```
function compareMstAlgos(adj list number, n number) returns number
end
```

```
function forestMstWeight(adj list number, n number) returns number
end
```

```
function isConnectedForMst(adj list number, n number) returns bool
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/graphmst"`
- Vérification : `afrilang check`
- Documentation : https://afrilang.dev/stdlib/std/c/graphmst/

Source (extrait)

```
module graphmst

function mstWeightPrim(adj list number, n number) returns number
end

function mstWeightKruskal(adj list number, n number) returns number
end

function mstEdges(adj list number, n number) returns number
end

function compareMstAlgos(adj list number, n number) returns number
end

function forestMstWeight(adj list number, n number) returns number
```

```
end

function isConnectedForMst(adj list number, n number) returns bool
end
end
```
