1. Vue d'ensemble

Bibliothèque AFRILANG ‘std/c/geomscale‘ (niveau complex, catégorie complex). Elle expose 7 fonction(s) : scalSum, scalMean, scalMin, scalMax, scalVar, scalStd, scalNorm.

‘import ”std/c/geomscale”‘ · ‘use geomscale‘

```
- `scalSum(v list number) → number`
- `scalMean(v list number) → number`
- `scalMin(v list number) → number`
- `scalMax(v list number) → number`
- `scalVar(v list number) → number`
- `scalStd(v list number) → number`
- `scalNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/geomscale"
use geomscale
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 scalSum(v list number) → number•
 scalMean(v list number) → number•
 scalMin(v list number) → number•
 scalMax(v list number) → number•
 scalVar(v list number) → number•
 scalStd(v list number) → number•
 scalNorm(v list number) → list
```

4. Exemples d'utilisation

```
import "std/c/geomscale"
use geomscale
```

```
create result = scalSum(/* args */)
say result
```

```
create result = scalMean(/* args */)
say result
```

```
create result = scalMin(/* args */)
say result
```

```
create result = scalMax(/* args */)
say result
```

```
create result = scalVar(/* args */)
say result
```

```
create result = scalStd(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/geomscale"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module geomscale

```
function scalSum(v list number) returns number
end
```

```
function scalMean(v list number) returns number
end
```

```
function scalMin(v list number) returns number
end
```

```
function scalMax(v list number) returns number
end
```

```
function scalVar(v list number) returns number
end
```

```
function scalStd(v list number) returns number
end
```

```
function scalNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/geomscale‘ (tier complex, category complex). Exports 7 function(s): scalSum, scalMean, scalMin, scalMax, scalVar, scalStd, scalNorm.
‘import ”std/c/geomscale”‘ · ‘use geomscale‘

```
- `scalSum(v list number) → number`
- `scalMean(v list number) → number`
- `scalMin(v list number) → number`
- `scalMax(v list number) → number`
- `scalVar(v list number) → number`
- `scalStd(v list number) → number`
- `scalNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/geomscale"
use geomscale
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 scalSum(v list number) → number•
 scalMean(v list number) → number•
 scalMin(v list number) → number•
 scalMax(v list number) → number•
 scalVar(v list number) → number•
 scalStd(v list number) → number•
 scalNorm(v list number) → list
```

4. Usage examples

```
import "std/c/geomscale"
use geomscale
```

```
create result = scalSum(/* args */)
say result
```

```
create result = scalMean(/* args */)
say result
```

```
create result = scalMin(/* args */)
say result
```

```
create result = scalMax(/* args */)
say result
```

```
create result = scalVar(/* args */)
say result
```

```
create result = scalStd(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/geomscale"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module geomscale

```
function scalSum(v list number) returns number
end
```

```
function scalMean(v list number) returns number
end
```

```
function scalMin(v list number) returns number
end
```

```
function scalMax(v list number) returns number
end
```

```
function scalVar(v list number) returns number
end
```

```
function scalStd(v list number) returns number
end
```

```
function scalNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/geomscale"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/geomscale/`

Source (extrait)

```
module geomscale

function scalSum(v list number) returns number
end

function scalMean(v list number) returns number
```

```
end

function scalMin(v list number) returns number
end

function scalMax(v list number) returns number
end

function scalVar(v list number) returns number
end

function scalStd(v list number) returns number
end

function scalNorm(v list number) returns list number
end
end
```
