Français

1. Vue d'ensemble

Bibliothèque AFRILANG ‘std/physics‘ (niveau simple, catégorie science). Elle expose 2 fonction(s) : force, kineticEnergy.

‘import ”std/physics”‘ · ‘use physics‘

```
- `force(m number, a number) → number`
- `kineticEnergy(m number, v number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/physics"
use physics
```

```
Niveau : simple · Catégorie : Sciences
Physique, chimie, unités, conversions.
```

3. Référence API

```
•
 force(m number, a number) → number•
 kineticEnergy(m number, v number) → number
```

4. Exemples d'utilisation

```
import "std/physics"
use physics
```

```
create result = force(/* args */)
say result
```

```
create result = kineticEnergy(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/physics"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module physics

```
function force(m number, a number) returns number
end
```

```
function kineticEnergy(m number, v number) returns number
end
end
```

English

1. Overview

AFRILANG library ‘std/physics‘ (tier simple, category science). Exports 2 function(s): force, kineticEnergy.

‘import ”std/physics”‘ · ‘use physics‘

```
- `force(m number, a number) → number`
- `kineticEnergy(m number, v number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/physics"
use physics
```

```
Tier: simple · Category: Science
Physics, chemistry, units, conversions.
```

3. API reference

```
•
 force(m number, a number) → number•
 kineticEnergy(m number, v number) → number
```

4. Usage examples

```
import "std/physics"
use physics
```

```
create result = force(/* args */)
say result
```

```
create result = kineticEnergy(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/physics"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module physics

```
function force(m number, a number) returns number
end
```

```
function kineticEnergy(m number, v number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/physics"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/physics/`

Source (extrait)

```
module physics

function force(m number, a number) returns number
end

function kineticEnergy(m number, v number) returns number
end
end
```
