1. Vue d'ensemble

Bibliothèque AFRILANG ‘std/c/stathistogram‘ (niveau complex, catégorie complex). Elle expose 6 fonction(s) : histogram, binEdges, freqDensity, cumFreq, modeBin, binWidth.

‘import ”std/c/stathistogram”‘ · ‘use stathistogram‘

```
- `histogram(v list number, bins number) → list number`
- `binEdges(v list number, bins number) → list number`
- `freqDensity(v list number, bins number) → list number`
- `cumFreq(v list number, bins number) → list number`
- `modeBin(v list number, bins number) → number`
- `binWidth(v list number, bins number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/stathistogram"
use stathistogram
```

```
Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés — graphes, NLP, réseaux complexes.
```

3. Référence API

```
•
 histogram(v list number, bins number) → list•
 binEdges(v list number, bins number) → list•
 freqDensity(v list number, bins number) → list•
 cumFreq(v list number, bins number) → list•
 modeBin(v list number, bins number) → number•
 binWidth(v list number, bins number) → number
```

4. Exemples d'utilisation

```
import "std/c/stathistogram"
use stathistogram
```

```
create result = histogram(/* args */)
say result
```

```
create result = binEdges(/* args */)
say result
```

```
create result = freqDensity(/* args */)
say result
```

```
create result = cumFreq(/* args */)
say result
```

```
create result = modeBin(/* args */)
say result
```

```
create result = binWidth(/* args */)
say result
```

5. Bonnes pratiques

```
•
 Préférez `import "std/c/stathistogram"` en tête de fichier.•
 Lancez `afrilang check` avant de livrer.•
 Combinez avec les modules stdlib de la même catégorie.•
 Voir /stdlib/ pour le source live et les démos playground.•
 Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe — source

module stathistogram

```
function histogram(v list number, bins number) returns list number
end
```

```
function binEdges(v list number, bins number) returns list number
end
```

```
function freqDensity(v list number, bins number) returns list number
end
```

```
function cumFreq(v list number, bins number) returns list number
end
```

```
function modeBin(v list number, bins number) returns number
end
```

```
function binWidth(v list number, bins number) returns number
end
end
```

English

1. Overview

AFRILANG library ‘std/c/stathistogram‘ (tier complex, category complex). Exports 6 function(s): histogram, binEdges, freqDensity, cumFreq, modeBin, binWidth.
‘import ”std/c/stathistogram”‘ · ‘use stathistogram‘

```
- `histogram(v list number, bins number) → list number`
- `binEdges(v list number, bins number) → list number`
- `freqDensity(v list number, bins number) → list number`
- `cumFreq(v list number, bins number) → list number`
- `modeBin(v list number, bins number) → number`
- `binWidth(v list number, bins number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/stathistogram"
use stathistogram
```

```
Tier: complex · Category: Complex modules (c/)
Advanced domains — graphs, NLP, complex networks.
```

3. API reference

```
•
 histogram(v list number, bins number) → list•
 binEdges(v list number, bins number) → list•
 freqDensity(v list number, bins number) → list•
 cumFreq(v list number, bins number) → list•
 modeBin(v list number, bins number) → number•
 binWidth(v list number, bins number) → number
```

4. Usage examples

```
import "std/c/stathistogram"
use stathistogram
```

```
create result = histogram(/* args */)
say result
```

```
create result = binEdges(/* args */)
say result
```

```
create result = freqDensity(/* args */)
say result
```

```
create result = cumFreq(/* args */)
say result
```

```
create result = modeBin(/* args */)
say result
```

```
create result = binWidth(/* args */)
say result
```

5. Best practices

```
•
 Prefer `import "std/c/stathistogram"` at the top of your file.•
 Run `afrilang check` before shipping.•
 Combine with related stdlib modules from the same category.•
 See /stdlib/ for the live source and playground demos.•
 Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix — source

module stathistogram

```
function histogram(v list number, bins number) returns list number
end
```

```
function binEdges(v list number, bins number) returns list number
end
```

```
function freqDensity(v list number, bins number) returns list number
end
```

```
function cumFreq(v list number, bins number) returns list number
end
```

```
function modeBin(v list number, bins number) returns number
end
```

```
function binWidth(v list number, bins number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/stathistogram"`
- Vérification : `afrilang check`
- Documentation : `https://afrilang.dev/stdlib/std/c/stathistogram/`

Source (extrait)

```
module stathistogram

function histogram(v list number, bins number) returns list number
end

function binEdges(v list number, bins number) returns list number
end

function freqDensity(v list number, bins number) returns list number
end

function cumFreq(v list number, bins number) returns list number
end

function modeBin(v list number, bins number) returns number
```

```
end

function binWidth(v list number, bins number) returns number
end
end
```
