

AFRILANG Stdlib

std/c/stattttest

Bibliothèque AFRILANG `std/c/stattttest` (niveau complex, catégorie complex). Elle expose 6 fonction(s) :
tStatistic, poo

```
`import "std/c/stattttest" . `use stattttest`
```

- `tStatistic(a list number, b list number) ? number`
- `pooledVariance(a list number, b list number) ? number`
- `cohenD(a list number, b list number) ? number`
- `meanDiff(a list number, b list number) ? number`
- `welchT(a list number, b list number) ? number`
- `effectSize(a list number, b list number) ? number`

Category: complex | Tier: complex | Functions: 6

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/stattttest` (niveau complex, catégorie complex). Elle expose 6 fonction(s) : tStatistic, poo

```
`import "std/c/stattttest" . `use stattttest`  
- `tStatistic(a list number, b list number) ? number`  
- `pooledVariance(a list number, b list number) ? number`  
- `cohenD(a list number, b list number) ? number`  
- `meanDiff(a list number, b list number) ? number`  
- `welchT(a list number, b list number) ? number`  
- `effectSize(a list number, b list number) ? number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/stattttest"  
use stattttest
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? tStatistic(a list number, b list number) ? number  
? pooledVariance(a list number, b list number) ? number  
? cohenD(a list number, b list number) ? number  
? meanDiff(a list number, b list number) ? number  
? welchT(a list number, b list number) ? number  
? effectSize(a list number, b list number) ? number
```

4. Exemples d'utilisation

```
import "std/c/stattttest"  
use stattttest  
  
create result = tStatistic(/* args */)   
say result  
  
create result = pooledVariance(/* args */)   
say result  
  
create result = cohenD(/* args */)   
say result  
  
create result = meanDiff(/* args */)   
say result  
  
create result = welchT(/* args */)   
say result  
  
create result = effectSize(/* args */)   
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/stattttest"` en tête de fichier.
? Lancez `afrilang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module stattttest  
  
function tStatistic(a list number, b list number) returns number  
end
```

```
function pooledVariance(a list number, b list number) returns number
end

function cohenD(a list number, b list number) returns number
end

function meanDiff(a list number, b list number) returns number
end

function welchT(a list number, b list number) returns number
end

function effectSize(a list number, b list number) returns number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/stattttest` (tier complex, category complex). Exports 6 function(s):
tStatistic, pooledVariance,

```
`import "std/c/stattttest"` . `use stattttest`  
- `tStatistic(a list number, b list number) ? number`  
- `pooledVariance(a list number, b list number) ? number`  
- `cohenD(a list number, b list number) ? number`  
- `meanDiff(a list number, b list number) ? number`  
- `welchT(a list number, b list number) ? number`  
- `effectSize(a list number, b list number) ? number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/stattttest"  
use stattttest
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? tStatistic(a list number, b list number) ? number  
? pooledVariance(a list number, b list number) ? number  
? cohenD(a list number, b list number) ? number  
? meanDiff(a list number, b list number) ? number  
? welchT(a list number, b list number) ? number  
? effectSize(a list number, b list number) ? number
```

4. Usage examples

```
import "std/c/stattttest"  
use stattttest  
  
create result = tStatistic(/* args */)   
say result  
  
create result = pooledVariance(/* args */)   
say result  
  
create result = cohenD(/* args */)   
say result  
  
create result = meanDiff(/* args */)   
say result  
  
create result = welchT(/* args */)   
say result  
  
create result = effectSize(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/stattttest"` at the top of your file.  
? Run `afirang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module stattttest  
  
function tStatistic(a list number, b list number) returns number  
end
```

```
function pooledVariance(a list number, b list number) returns number
end

function cohenD(a list number, b list number) returns number
end

function meanDiff(a list number, b list number) returns number
end

function welchT(a list number, b list number) returns number
end

function effectSize(a list number, b list number) returns number
end
end
```
