

AFRILANG Stdlib

std/c/tsseason

Bibliothèque AFRILANG `std/c/tsseason` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : seasSum, seasMea

```
`import "std/c/tsseason" . `use tsseason`
```

- `seasSum(v list number) ? number`
- `seasMean(v list number) ? number`
- `seasMin(v list number) ? number`
- `seasMax(v list number) ? number`
- `seasVar(v list number) ? number`
- `seasStd(v list number) ? number`
- `seasNorm(v list number) ? list number`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/tsseason` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : seasSum, seasMea

```
`import "std/c/tsseason"` . `use tsseason`  
- `seasSum(v list number) ? number`  
- `seasMean(v list number) ? number`  
- `seasMin(v list number) ? number`  
- `seasMax(v list number) ? number`  
- `seasVar(v list number) ? number`  
- `seasStd(v list number) ? number`  
- `seasNorm(v list number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/tsseason"  
use tsseason
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? seasSum(v list number) ? number  
? seasMean(v list number) ? number  
? seasMin(v list number) ? number  
? seasMax(v list number) ? number  
? seasVar(v list number) ? number  
? seasStd(v list number) ? number  
? seasNorm(v list number) ? list
```

4. Exemples d'utilisation

```
import "std/c/tsseason"  
use tsseason  
  
create result = seasSum(/* args */)   
say result  
  
create result = seasMean(/* args */)   
say result  
  
create result = seasMin(/* args */)   
say result  
  
create result = seasMax(/* args */)   
say result  
  
create result = seasVar(/* args */)   
say result  
  
create result = seasStd(/* args */)   
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/tsseason"` en tête de fichier.
? Lancez `afrilang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module tsseason
```

```
function seasSum(v list number) returns number
end

function seasMean(v list number) returns number
end

function seasMin(v list number) returns number
end

function seasMax(v list number) returns number
end

function seasVar(v list number) returns number
end

function seasStd(v list number) returns number
end

function seasNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/tsseason` (tier complex, category complex). Exports 7 function(s): seasSum, seasMean, seasMin, s

```
`import "std/c/tsseason"` · `use tsseason`  
- `seasSum(v list number) ? number`  
- `seasMean(v list number) ? number`  
- `seasMin(v list number) ? number`  
- `seasMax(v list number) ? number`  
- `seasVar(v list number) ? number`  
- `seasStd(v list number) ? number`  
- `seasNorm(v list number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/tsseason"  
use tsseason
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? seasSum(v list number) ? number  
? seasMean(v list number) ? number  
? seasMin(v list number) ? number  
? seasMax(v list number) ? number  
? seasVar(v list number) ? number  
? seasStd(v list number) ? number  
? seasNorm(v list number) ? list
```

4. Usage examples

```
import "std/c/tsseason"  
use tsseason  
  
create result = seasSum(/* args */)   
say result  
  
create result = seasMean(/* args */)   
say result  
  
create result = seasMin(/* args */)   
say result  
  
create result = seasMax(/* args */)   
say result  
  
create result = seasVar(/* args */)   
say result  
  
create result = seasStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/tsseason"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module tsseason
```

```
function seasSum(v list number) returns number
end

function seasMean(v list number) returns number
end

function seasMin(v list number) returns number
end

function seasMax(v list number) returns number
end

function seasVar(v list number) returns number
end

function seasStd(v list number) returns number
end

function seasNorm(v list number) returns list number
end
end
```
