

AFRILANG Stdlib

std/collision

Bibliothèque AFRILANG `std/collision` (niveau simple, catégorie games). Elle expose 2 fonction(s) : pointInRect, rectsOv

```
`import "std/collision" · `use collision`
```

```
- `pointInRect(px number, py number, rx number, ry number, rw number, rh number) ? bool`
```

```
- `rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) ? bool`
```

Category: games | Tier: simple | Functions: 2

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/collision` (niveau simple, catégorie games). Elle expose 2 fonction(s) : pointInRect, rectsOv

```
`import "std/collision"` · `use collision`
```

```
- `pointInRect(px number, py number, rx number, ry number, rw number, rh number) ? bool`
```

```
- `rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) ? bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/collision"
use collision
```

Niveau : simple · Catégorie : Jeux & simulation

Dés, collisions, physique ludique.

3. Référence API

```
? pointInRect(px number, py number, rx number, ry number, rw number, rh number) ? bool
```

```
? rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) ? bool
```

4. Exemples d'utilisation

```
import "std/collision"
use collision

create result = pointInRect(/* args */)
say result

create result = rectsOverlap(/* args */)
say result
```

5. Bonnes pratiques

- ? Préférez `import "std/collision"` en tête de fichier.
- ? Lancez `afrilang check` avant de livrer.
- ? Combinez avec les modules stdlib de la même catégorie.
- ? Voir /stdlib/ pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module collision

function pointInRect(px number, py number, rx number, ry number, rw number, rh number) returns bool
end

function rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) returns bo
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/collision` (tier simple, category games). Exports 2 function(s): pointInRect, rectsOverlap.

```
`import "std/collision"` · `use collision`
```

```
- `pointInRect(px number, py number, rx number, ry number, rw number, rh number) ? bool`  
- `rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) ? bool`
```

2. Installation & import

Add the module to your program:

```
import "std/collision"  
use collision
```

Tier: simple · Category: Games & simulation
Dice, collisions, game physics.

3. API reference

```
? pointInRect(px number, py number, rx number, ry number, rw number, rh number) ? bool  
? rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) ? bool
```

4. Usage examples

```
import "std/collision"  
use collision  
  
create result = pointInRect(/* args */)   
say result  
  
create result = rectsOverlap(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/collision"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module collision  
  
function pointInRect(px number, py number, rx number, ry number, rw number, rh number) returns bool  
end  
  
function rectsOverlap(x1 number, y1 number, w1 number, h1 number, x2 number, y2 number, w2 number, h2 number) returns bo  
end  
end
```
