```

- `monthlyPayment(principal number, rate number, months number) ? number`
- `totalPaid(payment number, months number) ? number`

Category: finance | Tier: simple | Functions: 2

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/loan` (niveau simple, catégorie finance). Elle expose 2 fonction(s) :
monthlyPayment, totalPa

```
`import "std/loan"` · `use loan`
```

- `monthlyPayment(principal number, rate number, months number) ? number`
- `totalPaid(payment number, months number) ? number`

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/loan"  
use loan
```

Niveau : simple · Catégorie : Finance
Monnaie, intérêts, budgets, marchés.

3. Référence API

? monthlyPayment(principal number, rate number, months number) ? number
? totalPaid(payment number, months number) ? number

4. Exemples d'utilisation

```
import "std/loan"  
use loan  
  
create result = monthlyPayment(/* args */)   
say result  
  
create result = totalPaid(/* args */)   
say result
```

5. Bonnes pratiques

- ? Préférez `import "std/loan"` en tête de fichier.
- ? Lancez `afrilang check` avant de livrer.
- ? Combinez avec les modules stdlib de la même catégorie.
- ? Voir /stdlib/ pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module loan  
  
function monthlyPayment(principal number, rate number, months number) returns number  
end  
  
function totalPaid(payment number, months number) returns number  
end  
end
```

ENGLISH

1. Overview

AFRILANG library `std/loan` (tier simple, category finance). Exports 2 function(s):
monthlyPayment, totalPaid.

```
`import "std/loan"` · `use loan`
```

- `monthlyPayment(principal number, rate number, months number) ? number`
- `totalPaid(payment number, months number) ? number`

2. Installation & import

Add the module to your program:

```
import "std/loan"  
use loan
```

Tier: simple · Category: Finance
Currency, interest, budgets, markets.

3. API reference

- ? monthlyPayment(principal number, rate number, months number) ? number
- ? totalPaid(payment number, months number) ? number

```
import "std/loan"  
use loan  
  
create result = monthlyPayment(/* args */)   
say result  
  
create result = totalPaid(/* args */)   
say result
```

5. Best practices

- ? Prefer `import "std/loan"` at the top of your file.
- ? Run `afriLang check` before shipping.
- ? Combine with related stdlib modules from the same category.
- ? See /stdlib/ for the live source and playground demos.
- ? Report issues on GitHub if an export is missing or undocumented.

6. Appendix ? source

```
module loan  
  
function monthlyPayment(principal number, rate number, months number) returns number  
end  
  
function totalPaid(payment number, months number) returns number  
end  
end
```
