

AFRILANG Stdlib

std/c/compbitpack

Bibliothèque AFRILANG `std/c/compbitpack` (niveau complex, catégorie complex). Elle expose 6 fonction(s) :
bitpackEncode

```
`import "std/c/compbitpack" . `use compbitpack`
```

- `bitpackEncode(data list number) ? list number`
- `bitpackDecode(encoded list number) ? list number`
- `bitpackRatio(data list number) ? number`
- `bitpackSize(data list number) ? number`
- `bitpackCompressed(data list number) ? number`
- `bitpackRoundTrip(data list number) ? bool`

Category: complex | Tier: complex | Functions: 6

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/compbitpack` (niveau complex, catégorie complex). Elle expose 6 fonction(s) : bitpackEncode

```
`import "std/c/compbitpack"` . `use compbitpack`  
- `bitpackEncode(data list number) ? list number`  
- `bitpackDecode(encoded list number) ? list number`  
- `bitpackRatio(data list number) ? number`  
- `bitpackSize(data list number) ? number`  
- `bitpackCompressed(data list number) ? number`  
- `bitpackRoundTrip(data list number) ? bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/compbitpack"  
use compbitpack
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? bitpackEncode(data list number) ? list  
? bitpackDecode(encoded list number) ? list  
? bitpackRatio(data list number) ? number  
? bitpackSize(data list number) ? number  
? bitpackCompressed(data list number) ? number  
? bitpackRoundTrip(data list number) ? bool
```

4. Exemples d'utilisation

```
import "std/c/compbitpack"  
use compbitpack  
  
create result = bitpackEncode(/* args */)   
say result  
  
create result = bitpackDecode(/* args */)   
say result  
  
create result = bitpackRatio(/* args */)   
say result  
  
create result = bitpackSize(/* args */)   
say result  
  
create result = bitpackCompressed(/* args */)   
say result  
  
create result = bitpackRoundTrip(/* args */)   
say result
```

5. Bonnes pratiques

```
? Préférez `import "std/c/compbitpack"` en tête de fichier.  
? Lancez `afrilang check` avant de livrer.  
? Combinez avec les modules stdlib de la même catégorie.  
? Voir /stdlib/ pour le source live et les démos playground.  
? Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe ? source

```
module compbitpack  
  
function bitpackEncode(data list number) returns list number  
end
```

```
function bitpackDecode(encoded list number) returns list number
end

function bitpackRatio(data list number) returns number
end

function bitpackSize(data list number) returns number
end

function bitpackCompressed(data list number) returns number
end

function bitpackRoundTrip(data list number) returns bool
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/compbitpack` (tier complex, category complex). Exports 6 function(s):
bitpackEncode, bitpackDeco

```
`import "std/c/compbitpack"` . `use compbitpack`  
- `bitpackEncode(data list number) ? list number`  
- `bitpackDecode(encoded list number) ? list number`  
- `bitpackRatio(data list number) ? number`  
- `bitpackSize(data list number) ? number`  
- `bitpackCompressed(data list number) ? number`  
- `bitpackRoundTrip(data list number) ? bool`
```

2. Installation & import

Add the module to your program:

```
import "std/c/compbitpack"  
use compbitpack
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? bitpackEncode(data list number) ? list  
? bitpackDecode(encoded list number) ? list  
? bitpackRatio(data list number) ? number  
? bitpackSize(data list number) ? number  
? bitpackCompressed(data list number) ? number  
? bitpackRoundTrip(data list number) ? bool
```

4. Usage examples

```
import "std/c/compbitpack"  
use compbitpack  
  
create result = bitpackEncode(/* args */)   
say result  
  
create result = bitpackDecode(/* args */)   
say result  
  
create result = bitpackRatio(/* args */)   
say result  
  
create result = bitpackSize(/* args */)   
say result  
  
create result = bitpackCompressed(/* args */)   
say result  
  
create result = bitpackRoundTrip(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/compbitpack"` at the top of your file.  
? Run `afirang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module compbitpack  
  
function bitpackEncode(data list number) returns list number  
end
```

```
function bitpackDecode(encoded list number) returns list number
end

function bitpackRatio(data list number) returns number
end

function bitpackSize(data list number) returns number
end

function bitpackCompressed(data list number) returns number
end

function bitpackRoundTrip(data list number) returns bool
end
end
```
