

AFRILANG Stdlib

std/c/csvaggregate

Bibliothèque AFRILANG `std/c/csvaggregate` (niveau complex, catégorie complex). Elle expose 8 fonction(s)
: aggrSum, agg

```
`import "std/c/csvaggregate" . `use csvaggregate`
```

- `aggrSum(v list number) ? number`
- `aggrMean(v list number) ? number`
- `aggrMin(v list number) ? number`
- `aggrMax(v list number) ? number`
- `aggrVar(v list number) ? number`
- `aggrStd(v list number) ? number`
- `aggrNorm(v list number) ? list number`
- `filterGt(col list number, threshold number) ? list number`

Category: complex | Tier: complex | Functions: 8

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/csvaggregate` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : `aggrSum`, `agg`

```
`import "std/c/csvaggregate"` . `use csvaggregate`  
- `aggrSum(v list number) ? number`  
- `aggrMean(v list number) ? number`  
- `aggrMin(v list number) ? number`  
- `aggrMax(v list number) ? number`  
- `aggrVar(v list number) ? number`  
- `aggrStd(v list number) ? number`  
- `aggrNorm(v list number) ? list number`  
- `filterGt(col list number, threshold number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvaggregate"  
use csvaggregate
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? aggrSum(v list number) ? number  
? aggrMean(v list number) ? number  
? aggrMin(v list number) ? number  
? aggrMax(v list number) ? number  
? aggrVar(v list number) ? number  
? aggrStd(v list number) ? number  
? aggrNorm(v list number) ? list  
? filterGt(col list number, threshold number) ? list
```

4. Exemples d'utilisation

```
import "std/c/csvaggregate"  
use csvaggregate  
  
create result = aggrSum(/* args */)   
say result  
  
create result = aggrMean(/* args */)   
say result  
  
create result = aggrMin(/* args */)   
say result  
  
create result = aggrMax(/* args */)   
say result  
  
create result = aggrVar(/* args */)   
say result  
  
create result = aggrStd(/* args */)   
say result
```

5. Bonnes pratiques

- ? Préférez ``import "std/c/csvaggregate"`` en tête de fichier.
- ? Lancez ``afrilang check`` avant de livrer.
- ? Combinez avec les modules `stdlib` de la même catégorie.
- ? Voir `/stdlib/` pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module csvaggregate
function aggrSum(v list number) returns number
end
function aggrMean(v list number) returns number
end
function aggrMin(v list number) returns number
end
function aggrMax(v list number) returns number
end
function aggrVar(v list number) returns number
end
function aggrStd(v list number) returns number
end
function aggrNorm(v list number) returns list number
end
function filterGt(col list number, threshold number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/csvaggregate` (tier complex, category complex). Exports 8 function(s):
aggrSum, aggrMean, aggrMi

```
`import "std/c/csvaggregate"` · `use csvaggregate`  
- `aggrSum(v list number) ? number`  
- `aggrMean(v list number) ? number`  
- `aggrMin(v list number) ? number`  
- `aggrMax(v list number) ? number`  
- `aggrVar(v list number) ? number`  
- `aggrStd(v list number) ? number`  
- `aggrNorm(v list number) ? list number`  
- `filterGt(col list number, threshold number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvaggregate"  
use csvaggregate
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? aggrSum(v list number) ? number  
? aggrMean(v list number) ? number  
? aggrMin(v list number) ? number  
? aggrMax(v list number) ? number  
? aggrVar(v list number) ? number  
? aggrStd(v list number) ? number  
? aggrNorm(v list number) ? list  
? filterGt(col list number, threshold number) ? list
```

4. Usage examples

```
import "std/c/csvaggregate"  
use csvaggregate  
  
create result = aggrSum(/* args */)   
say result  
  
create result = aggrMean(/* args */)   
say result  
  
create result = aggrMin(/* args */)   
say result  
  
create result = aggrMax(/* args */)   
say result  
  
create result = aggrVar(/* args */)   
say result  
  
create result = aggrStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/csvaggregate"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module csvaggregate
function aggrSum(v list number) returns number
end
function aggrMean(v list number) returns number
end
function aggrMin(v list number) returns number
end
function aggrMax(v list number) returns number
end
function aggrVar(v list number) returns number
end
function aggrStd(v list number) returns number
end
function aggrNorm(v list number) returns list number
end
function filterGt(col list number, threshold number) returns list number
end
end
```
