

AFRILANG Stdlib

std/c/csvjoin

Bibliothèque AFRILANG `std/c/csvjoin` (niveau complex, catégorie complex). Elle expose 8 fonction(s) :
joinSum, joinMean

```
`import "std/c/csvjoin" . `use csvjoin`
```

- `joinSum(v list number) ? number`
- `joinMean(v list number) ? number`
- `joinMin(v list number) ? number`
- `joinMax(v list number) ? number`
- `joinVar(v list number) ? number`
- `joinStd(v list number) ? number`
- `joinNorm(v list number) ? list number`
- `filterGt(col list number, threshold number) ? list number`

Category: complex | Tier: complex | Functions: 8

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG ``std/c/csvjoin`` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : `joinSum`, `joinMean`

```
`import "std/c/csvjoin"` · `use csvjoin`  
- `joinSum(v list number) ? number`  
- `joinMean(v list number) ? number`  
- `joinMin(v list number) ? number`  
- `joinMax(v list number) ? number`  
- `joinVar(v list number) ? number`  
- `joinStd(v list number) ? number`  
- `joinNorm(v list number) ? list number`  
- `filterGt(col list number, threshold number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvjoin"  
use csvjoin
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? joinSum(v list number) ? number  
? joinMean(v list number) ? number  
? joinMin(v list number) ? number  
? joinMax(v list number) ? number  
? joinVar(v list number) ? number  
? joinStd(v list number) ? number  
? joinNorm(v list number) ? list  
? filterGt(col list number, threshold number) ? list
```

4. Exemples d'utilisation

```
import "std/c/csvjoin"  
use csvjoin  
  
create result = joinSum(/* args */)   
say result  
  
create result = joinMean(/* args */)   
say result  
  
create result = joinMin(/* args */)   
say result  
  
create result = joinMax(/* args */)   
say result  
  
create result = joinVar(/* args */)   
say result  
  
create result = joinStd(/* args */)   
say result
```

5. Bonnes pratiques

- ? Préférez ``import "std/c/csvjoin"`` en tête de fichier.
- ? Lancez ``afrilang check`` avant de livrer.
- ? Combinez avec les modules `stdlib` de la même catégorie.
- ? Voir `/stdlib/` pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module csvjoin
function joinSum(v list number) returns number
end
function joinMean(v list number) returns number
end
function joinMin(v list number) returns number
end
function joinMax(v list number) returns number
end
function joinVar(v list number) returns number
end
function joinStd(v list number) returns number
end
function joinNorm(v list number) returns list number
end
function filterGt(col list number, threshold number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library ``std/c/csvjoin`` (tier complex, category complex). Exports 8 function(s): `joinSum`, `joinMean`, `joinMin`, `jo`

```
`import "std/c/csvjoin" . `use csvjoin`  
- `joinSum(v list number) ? number`  
- `joinMean(v list number) ? number`  
- `joinMin(v list number) ? number`  
- `joinMax(v list number) ? number`  
- `joinVar(v list number) ? number`  
- `joinStd(v list number) ? number`  
- `joinNorm(v list number) ? list number`  
- `filterGt(col list number, threshold number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvjoin"  
use csvjoin
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? joinSum(v list number) ? number  
? joinMean(v list number) ? number  
? joinMin(v list number) ? number  
? joinMax(v list number) ? number  
? joinVar(v list number) ? number  
? joinStd(v list number) ? number  
? joinNorm(v list number) ? list  
? filterGt(col list number, threshold number) ? list
```

4. Usage examples

```
import "std/c/csvjoin"  
use csvjoin  
  
create result = joinSum(/* args */)   
say result  
  
create result = joinMean(/* args */)   
say result  
  
create result = joinMin(/* args */)   
say result  
  
create result = joinMax(/* args */)   
say result  
  
create result = joinVar(/* args */)   
say result  
  
create result = joinStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/csvjoin"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module csvjoin
function joinSum(v list number) returns number
end
function joinMean(v list number) returns number
end
function joinMin(v list number) returns number
end
function joinMax(v list number) returns number
end
function joinVar(v list number) returns number
end
function joinStd(v list number) returns number
end
function joinNorm(v list number) returns list number
end
function filterGt(col list number, threshold number) returns list number
end
end
```
