

AFRILANG Stdlib

std/c/csvsort

Bibliothèque AFRILANG `std/c/csvsort` (niveau complex, catégorie complex). Elle expose 6 fonction(s) :
sortAsc, sortDesc

```
`import "std/c/csvsort" · `use csvsort`
```

- `sortAsc(col list number) ? list number`
- `sortDesc(col list number) ? list number`
- `argsort(col list number) ? list number`
- `rank(col list number) ? list number`
- `topK(col list number, k number) ? list number`
- `bottomK(col list number, k number) ? list number`

Category: complex | Tier: complex | Functions: 6

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG ``std/c/csvsort`` (niveau complex, catégorie complex). Elle expose 6 fonction(s) : `sortAsc`, `sortDesc`

```
`import "std/c/csvsort"` · `use csvsort`  
- `sortAsc(col list number) ? list number`  
- `sortDesc(col list number) ? list number`  
- `argsort(col list number) ? list number`  
- `rank(col list number) ? list number`  
- `topK(col list number, k number) ? list number`  
- `bottomK(col list number, k number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvsort"  
use csvsort
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? sortAsc(col list number) ? list  
? sortDesc(col list number) ? list  
? argsort(col list number) ? list  
? rank(col list number) ? list  
? topK(col list number, k number) ? list  
? bottomK(col list number, k number) ? list
```

4. Exemples d'utilisation

```
import "std/c/csvsort"  
use csvsort  
  
create result = sortAsc(/* args */)   
say result  
  
create result = sortDesc(/* args */)   
say result  
  
create result = argsort(/* args */)   
say result  
  
create result = rank(/* args */)   
say result  
  
create result = topK(/* args */)   
say result  
  
create result = bottomK(/* args */)   
say result
```

5. Bonnes pratiques

```
? Préférez `import "std/c/csvsort"` en tête de fichier.  
? Lancez `afrilang check` avant de livrer.  
? Combinez avec les modules stdlib de la même catégorie.  
? Voir /stdlib/ pour le source live et les démos playground.  
? Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe ? source

```
module csvsort  
  
function sortAsc(col list number) returns list number  
end
```

```
function sortDesc(col list number) returns list number  
end
```

```
function argsort(col list number) returns list number  
end
```

```
function rank(col list number) returns list number  
end
```

```
function topK(col list number, k number) returns list number  
end
```

```
function bottomK(col list number, k number) returns list number  
end  
end
```

ENGLISH

1. Overview

AFRILANG library ``std/c/csvsort`` (tier complex, category complex). Exports 6 function(s): `sortAsc`, `sortDesc`, `argsort`, `ra`

```
`import "std/c/csvsort"` · `use csvsort`  
- `sortAsc(col list number) ? list number`  
- `sortDesc(col list number) ? list number`  
- `argsort(col list number) ? list number`  
- `rank(col list number) ? list number`  
- `topK(col list number, k number) ? list number`  
- `bottomK(col list number, k number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvsort"  
use csvsort
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? sortAsc(col list number) ? list  
? sortDesc(col list number) ? list  
? argsort(col list number) ? list  
? rank(col list number) ? list  
? topK(col list number, k number) ? list  
? bottomK(col list number, k number) ? list
```

4. Usage examples

```
import "std/c/csvsort"  
use csvsort  
  
create result = sortAsc(/* args */)   
say result  
  
create result = sortDesc(/* args */)   
say result  
  
create result = argsort(/* args */)   
say result  
  
create result = rank(/* args */)   
say result  
  
create result = topK(/* args */)   
say result  
  
create result = bottomK(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/csvsort"` at the top of your file.  
? Run `afirang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module csvsort  
  
function sortAsc(col list number) returns list number  
end
```

```
function sortDesc(col list number) returns list number  
end
```

```
function argsort(col list number) returns list number  
end
```

```
function rank(col list number) returns list number  
end
```

```
function topK(col list number, k number) returns list number  
end
```

```
function bottomK(col list number, k number) returns list number  
end  
end
```
