

AFRILANG Stdlib

std/c/csvunion

Bibliothèque AFRILANG `std/c/csvunion` (niveau complex, catégorie complex). Elle expose 8 fonction(s) :
unioSum, unioMea

```
`import "std/c/csvunion" · `use csvunion`
```

- `unioSum(v list number) ? number`
- `unioMean(v list number) ? number`
- `unioMin(v list number) ? number`
- `unioMax(v list number) ? number`
- `unioVar(v list number) ? number`
- `unioStd(v list number) ? number`
- `unioNorm(v list number) ? list number`
- `filterGt(col list number, threshold number) ? list number`

Category: complex | Tier: complex | Functions: 8

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/csvunion` (niveau complex, catégorie complex). Elle expose 8 fonction(s) : unioSum, unioMea

```
`import "std/c/csvunion"` . `use csvunion`  
- `unioSum(v list number) ? number`  
- `unioMean(v list number) ? number`  
- `unioMin(v list number) ? number`  
- `unioMax(v list number) ? number`  
- `unioVar(v list number) ? number`  
- `unioStd(v list number) ? number`  
- `unioNorm(v list number) ? list number`  
- `filterGt(col list number, threshold number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvunion"  
use csvunion
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? unioSum(v list number) ? number  
? unioMean(v list number) ? number  
? unioMin(v list number) ? number  
? unioMax(v list number) ? number  
? unioVar(v list number) ? number  
? unioStd(v list number) ? number  
? unioNorm(v list number) ? list  
? filterGt(col list number, threshold number) ? list
```

4. Exemples d'utilisation

```
import "std/c/csvunion"  
use csvunion  
  
create result = unioSum(/* args */)   
say result  
  
create result = unioMean(/* args */)   
say result  
  
create result = unioMin(/* args */)   
say result  
  
create result = unioMax(/* args */)   
say result  
  
create result = unioVar(/* args */)   
say result  
  
create result = unioStd(/* args */)   
say result
```

5. Bonnes pratiques

- ? Préférez `import "std/c/csvunion"` en tête de fichier.
- ? Lancez `afrilang check` avant de livrer.
- ? Combinez avec les modules stdlib de la même catégorie.
- ? Voir /stdlib/ pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module csvunion
function unioSum(v list number) returns number
end
function unioMean(v list number) returns number
end
function unioMin(v list number) returns number
end
function unioMax(v list number) returns number
end
function unioVar(v list number) returns number
end
function unioStd(v list number) returns number
end
function unioNorm(v list number) returns list number
end
function filterGt(col list number, threshold number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/csvunion` (tier complex, category complex). Exports 8 function(s):
unioSum, unioMean, unioMin, u

```
`import "std/c/csvunion"` · `use csvunion`  
- `unioSum(v list number) ? number`  
- `unioMean(v list number) ? number`  
- `unioMin(v list number) ? number`  
- `unioMax(v list number) ? number`  
- `unioVar(v list number) ? number`  
- `unioStd(v list number) ? number`  
- `unioNorm(v list number) ? list number`  
- `filterGt(col list number, threshold number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvunion"  
use csvunion  
  
Tier: complex · Category: Complex modules (c/)  
Advanced domains ? graphs, NLP, complex networks.
```

3. API reference

```
? unioSum(v list number) ? number  
? unioMean(v list number) ? number  
? unioMin(v list number) ? number  
? unioMax(v list number) ? number  
? unioVar(v list number) ? number  
? unioStd(v list number) ? number  
? unioNorm(v list number) ? list  
? filterGt(col list number, threshold number) ? list
```

4. Usage examples

```
import "std/c/csvunion"  
use csvunion  
  
create result = unioSum(/* args */)   
say result  
  
create result = unioMean(/* args */)   
say result  
  
create result = unioMin(/* args */)   
say result  
  
create result = unioMax(/* args */)   
say result  
  
create result = unioVar(/* args */)   
say result  
  
create result = unioStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/csvunion"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module csvunion
function unioSum(v list number) returns number
end
function unioMean(v list number) returns number
end
function unioMin(v list number) returns number
end
function unioMax(v list number) returns number
end
function unioVar(v list number) returns number
end
function unioStd(v list number) returns number
end
function unioNorm(v list number) returns list number
end
function filterGt(col list number, threshold number) returns list number
end
end
```
