

AFRILANG Stdlib

std/c/finforex

Bibliothèque AFRILANG `std/c/finforex` (niveau complex, catégorie complex). Elle expose 7 fonction(s) :
foreSum, foreMea

```
`import "std/c/finforex"` · `use finforex`
```

- `foreSum(v list number) ? number`
- `foreMean(v list number) ? number`
- `foreMin(v list number) ? number`
- `foreMax(v list number) ? number`
- `foreVar(v list number) ? number`
- `foreStd(v list number) ? number`
- `foreNorm(v list number) ? list number`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG ``std/c/finforex`` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : `foreSum`, `foreMea`

```
`import "std/c/finforex"` . `use finforex`  
- `foreSum(v list number) ? number`  
- `foreMean(v list number) ? number`  
- `foreMin(v list number) ? number`  
- `foreMax(v list number) ? number`  
- `foreVar(v list number) ? number`  
- `foreStd(v list number) ? number`  
- `foreNorm(v list number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finforex"  
use finforex
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? foreSum(v list number) ? number  
? foreMean(v list number) ? number  
? foreMin(v list number) ? number  
? foreMax(v list number) ? number  
? foreVar(v list number) ? number  
? foreStd(v list number) ? number  
? foreNorm(v list number) ? list
```

4. Exemples d'utilisation

```
import "std/c/finforex"  
use finforex  
  
create result = foreSum(/* args */)   
say result  
  
create result = foreMean(/* args */)   
say result  
  
create result = foreMin(/* args */)   
say result  
  
create result = foreMax(/* args */)   
say result  
  
create result = foreVar(/* args */)   
say result  
  
create result = foreStd(/* args */)   
say result
```

5. Bonnes pratiques

- ? Préférez ``import "std/c/finforex"`` en tête de fichier.
- ? Lancez ``afrilang check`` avant de livrer.
- ? Combinez avec les modules `stdlib` de la même catégorie.
- ? Voir `/stdlib/` pour le source live et les démos playground.
- ? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

module finforex

```
function foreSum(v list number) returns number
end

function foreMean(v list number) returns number
end

function foreMin(v list number) returns number
end

function foreMax(v list number) returns number
end

function foreVar(v list number) returns number
end

function foreStd(v list number) returns number
end

function foreNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/finforex` (tier complex, category complex). Exports 7 function(s):
foreSum, foreMean, foreMin, f

```
`import "std/c/finforex"` · `use finforex`  
- `foreSum(v list number) ? number`  
- `foreMean(v list number) ? number`  
- `foreMin(v list number) ? number`  
- `foreMax(v list number) ? number`  
- `foreVar(v list number) ? number`  
- `foreStd(v list number) ? number`  
- `foreNorm(v list number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finforex"  
use finforex
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? foreSum(v list number) ? number  
? foreMean(v list number) ? number  
? foreMin(v list number) ? number  
? foreMax(v list number) ? number  
? foreVar(v list number) ? number  
? foreStd(v list number) ? number  
? foreNorm(v list number) ? list
```

4. Usage examples

```
import "std/c/finforex"  
use finforex  
  
create result = foreSum(/* args */)   
say result  
  
create result = foreMean(/* args */)   
say result  
  
create result = foreMin(/* args */)   
say result  
  
create result = foreMax(/* args */)   
say result  
  
create result = foreVar(/* args */)   
say result  
  
create result = foreStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/finforex"` at the top of your file.  
? Run `afriLang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module finforex
```

```
function foreSum(v list number) returns number
end

function foreMean(v list number) returns number
end

function foreMin(v list number) returns number
end

function foreMax(v list number) returns number
end

function foreVar(v list number) returns number
end

function foreStd(v list number) returns number
end

function foreNorm(v list number) returns list number
end
end
```
