

AFRILANG Stdlib

std/c/finportfolio

Bibliothèque AFRILANG `std/c/finportfolio` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : portSum, por

```
`import "std/c/finportfolio" . `use finportfolio`
```

- `portSum(v list number) ? number`
- `portMean(v list number) ? number`
- `portMin(v list number) ? number`
- `portMax(v list number) ? number`
- `portVar(v list number) ? number`
- `portStd(v list number) ? number`
- `portNorm(v list number) ? list number`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/finportfolio` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : portSum, por

```
`import "std/c/finportfolio"` . `use finportfolio`  
- `portSum(v list number) ? number`  
- `portMean(v list number) ? number`  
- `portMin(v list number) ? number`  
- `portMax(v list number) ? number`  
- `portVar(v list number) ? number`  
- `portStd(v list number) ? number`  
- `portNorm(v list number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finportfolio"  
use finportfolio
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? portSum(v list number) ? number  
? portMean(v list number) ? number  
? portMin(v list number) ? number  
? portMax(v list number) ? number  
? portVar(v list number) ? number  
? portStd(v list number) ? number  
? portNorm(v list number) ? list
```

4. Exemples d'utilisation

```
import "std/c/finportfolio"  
use finportfolio  
  
create result = portSum(/* args */)   
say result  
  
create result = portMean(/* args */)   
say result  
  
create result = portMin(/* args */)   
say result  
  
create result = portMax(/* args */)   
say result  
  
create result = portVar(/* args */)   
say result  
  
create result = portStd(/* args */)   
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/finportfolio"` en tête de fichier.
? Lancez `afirang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module finportfolio
```

```
function portSum(v list number) returns number
end

function portMean(v list number) returns number
end

function portMin(v list number) returns number
end

function portMax(v list number) returns number
end

function portVar(v list number) returns number
end

function portStd(v list number) returns number
end

function portNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/finportfolio` (tier complex, category complex). Exports 7 function(s):
portSum, portMean, portMi

```
`import "std/c/finportfolio"` . `use finportfolio`  
- `portSum(v list number) ? number`  
- `portMean(v list number) ? number`  
- `portMin(v list number) ? number`  
- `portMax(v list number) ? number`  
- `portVar(v list number) ? number`  
- `portStd(v list number) ? number`  
- `portNorm(v list number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finportfolio"  
use finportfolio
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? portSum(v list number) ? number  
? portMean(v list number) ? number  
? portMin(v list number) ? number  
? portMax(v list number) ? number  
? portVar(v list number) ? number  
? portStd(v list number) ? number  
? portNorm(v list number) ? list
```

4. Usage examples

```
import "std/c/finportfolio"  
use finportfolio  
  
create result = portSum(/* args */)   
say result  
  
create result = portMean(/* args */)   
say result  
  
create result = portMin(/* args */)   
say result  
  
create result = portMax(/* args */)   
say result  
  
create result = portVar(/* args */)   
say result  
  
create result = portStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/finportfolio"` at the top of your file.  
? Run `afirang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module finportfolio
```

```
function portSum(v list number) returns number
end

function portMean(v list number) returns number
end

function portMin(v list number) returns number
end

function portMax(v list number) returns number
end

function portVar(v list number) returns number
end

function portStd(v list number) returns number
end

function portNorm(v list number) returns list number
end
end
```
