

AFRILANG Stdlib

std/c/finvar

Bibliothèque AFRILANG ``std/c/finvar`` (niveau complex, catégorie complex). Elle expose 7 fonction(s) :
`varSum`, `varMean`, `v`

```
`import "std/c/finvar"` · `use finvar`
```

- ``varSum(v list number) ? number``
- ``varMean(v list number) ? number``
- ``varMin(v list number) ? number``
- ``varMax(v list number) ? number``
- ``varVar(v list number) ? number``
- ``varStd(v list number) ? number``
- ``varNorm(v list number) ? list number``

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG ``std/c/finvar`` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : `varSum`, `varMean`, `v`

```
`import "std/c/finvar"` . `use finvar`  
- `varSum(v list number) ? number`  
- `varMean(v list number) ? number`  
- `varMin(v list number) ? number`  
- `varMax(v list number) ? number`  
- `varVar(v list number) ? number`  
- `varStd(v list number) ? number`  
- `varNorm(v list number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finvar"  
use finvar
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? varSum(v list number) ? number  
? varMean(v list number) ? number  
? varMin(v list number) ? number  
? varMax(v list number) ? number  
? varVar(v list number) ? number  
? varStd(v list number) ? number  
? varNorm(v list number) ? list
```

4. Exemples d'utilisation

```
import "std/c/finvar"  
use finvar  
  
create result = varSum(/* args */)   
say result  
  
create result = varMean(/* args */)   
say result  
  
create result = varMin(/* args */)   
say result  
  
create result = varMax(/* args */)   
say result  
  
create result = varVar(/* args */)   
say result  
  
create result = varStd(/* args */)   
say result
```

5. Bonnes pratiques

? Préférez ``import "std/c/finvar"`` en tête de fichier.
? Lancez ``afirilang check`` avant de livrer.
? Combinez avec les modules `stdlib` de la même catégorie.
? Voir `/stdlib/` pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

```
module finvar
```

```
function varSum(v list number) returns number
end

function varMean(v list number) returns number
end

function varMin(v list number) returns number
end

function varMax(v list number) returns number
end

function varVar(v list number) returns number
end

function varStd(v list number) returns number
end

function varNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library ``std/c/finvar`` (tier complex, category complex). Exports 7 function(s): `varSum`, `varMean`, `varMin`, `varMax`

```
`import "std/c/finvar"` . `use finvar`  
- `varSum(v list number) ? number`  
- `varMean(v list number) ? number`  
- `varMin(v list number) ? number`  
- `varMax(v list number) ? number`  
- `varVar(v list number) ? number`  
- `varStd(v list number) ? number`  
- `varNorm(v list number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finvar"  
use finvar
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? varSum(v list number) ? number  
? varMean(v list number) ? number  
? varMin(v list number) ? number  
? varMax(v list number) ? number  
? varVar(v list number) ? number  
? varStd(v list number) ? number  
? varNorm(v list number) ? list
```

4. Usage examples

```
import "std/c/finvar"  
use finvar  
  
create result = varSum(/* args */)   
say result  
  
create result = varMean(/* args */)   
say result  
  
create result = varMin(/* args */)   
say result  
  
create result = varMax(/* args */)   
say result  
  
create result = varVar(/* args */)   
say result  
  
create result = varStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/finvar"` at the top of your file.  
? Run `afriLang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module finvar
```

```
function varSum(v list number) returns number
end

function varMean(v list number) returns number
end

function varMin(v list number) returns number
end

function varMax(v list number) returns number
end

function varVar(v list number) returns number
end

function varStd(v list number) returns number
end

function varNorm(v list number) returns list number
end
end
```
