

AFRILANG Stdlib

std/c/geompolygon

Bibliothèque AFRILANG `std/c/geompolygon` (niveau complex, catégorie complex). Elle expose 7 fonction(s)
: polySum, poly

```
`import "std/c/geompolygon" . `use geompolygon`
```

- `polySum(v list number) ? number`
- `polyMean(v list number) ? number`
- `polyMin(v list number) ? number`
- `polyMax(v list number) ? number`
- `polyVar(v list number) ? number`
- `polyStd(v list number) ? number`
- `polyNorm(v list number) ? list number`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/geompolygon` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : polySum, poly

```
`import "std/c/geompolygon" . `use geompolygon`  
- `polySum(v list number) ? number`  
- `polyMean(v list number) ? number`  
- `polyMin(v list number) ? number`  
- `polyMax(v list number) ? number`  
- `polyVar(v list number) ? number`  
- `polyStd(v list number) ? number`  
- `polyNorm(v list number) ? list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/geompolygon"  
use geompolygon
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? polySum(v list number) ? number  
? polyMean(v list number) ? number  
? polyMin(v list number) ? number  
? polyMax(v list number) ? number  
? polyVar(v list number) ? number  
? polyStd(v list number) ? number  
? polyNorm(v list number) ? list
```

4. Exemples d'utilisation

```
import "std/c/geompolygon"  
use geompolygon  
  
create result = polySum(/* args */)   
say result  
  
create result = polyMean(/* args */)   
say result  
  
create result = polyMin(/* args */)   
say result  
  
create result = polyMax(/* args */)   
say result  
  
create result = polyVar(/* args */)   
say result  
  
create result = polyStd(/* args */)   
say result
```

5. Bonnes pratiques

? Préférez `import "std/c/geompolygon"` en tête de fichier.
? Lancez `afirilang check` avant de livrer.
? Combinez avec les modules stdlib de la même catégorie.
? Voir /stdlib/ pour le source live et les démos playground.
? Signalez les problèmes sur GitHub si une export manque.

6. Annexe ? source

module geompolygon

```
function polySum(v list number) returns number
end

function polyMean(v list number) returns number
end

function polyMin(v list number) returns number
end

function polyMax(v list number) returns number
end

function polyVar(v list number) returns number
end

function polyStd(v list number) returns number
end

function polyNorm(v list number) returns list number
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/geompolygon` (tier complex, category complex). Exports 7 function(s): polySum, polyMean, polyMin

```
`import "std/c/geompolygon" . `use geompolygon`  
- `polySum(v list number) ? number`  
- `polyMean(v list number) ? number`  
- `polyMin(v list number) ? number`  
- `polyMax(v list number) ? number`  
- `polyVar(v list number) ? number`  
- `polyStd(v list number) ? number`  
- `polyNorm(v list number) ? list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/geompolygon"  
use geompolygon
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? polySum(v list number) ? number  
? polyMean(v list number) ? number  
? polyMin(v list number) ? number  
? polyMax(v list number) ? number  
? polyVar(v list number) ? number  
? polyStd(v list number) ? number  
? polyNorm(v list number) ? list
```

4. Usage examples

```
import "std/c/geompolygon"  
use geompolygon  
  
create result = polySum(/* args */)   
say result  
  
create result = polyMean(/* args */)   
say result  
  
create result = polyMin(/* args */)   
say result  
  
create result = polyMax(/* args */)   
say result  
  
create result = polyVar(/* args */)   
say result  
  
create result = polyStd(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/geompolygon"` at the top of your file.  
? Run `afrilang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module geompolygon
```

```
function polySum(v list number) returns number
end

function polyMean(v list number) returns number
end

function polyMin(v list number) returns number
end

function polyMax(v list number) returns number
end

function polyVar(v list number) returns number
end

function polyStd(v list number) returns number
end

function polyNorm(v list number) returns list number
end
end
```
