

AFRILANG Stdlib

std/c/nlpedit

Bibliothèque AFRILANG `std/c/nlpedit` (niveau complex, catégorie complex). Elle expose 7 fonction(s) :
editLen, editUppe

```
`import "std/c/nlpedit" . `use nlpedit`
```

- `editLen(s text) ? number`
- `editUpper(s text) ? text`
- `editLower(s text) ? text`
- `editTrim(s text) ? text`
- `editSplit(s text, delim text) ? list text`
- `editJoin(parts list text, delim text) ? text`
- `editReplace(s text, from text, to text) ? text`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG ``std/c/nlpedit`` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : `editLen`, `editUppe`

```
`import "std/c/nlpedit"` · `use nlpedit`  
- `editLen(s text) ? number`  
- `editUpper(s text) ? text`  
- `editLower(s text) ? text`  
- `editTrim(s text) ? text`  
- `editSplit(s text, delim text) ? list text`  
- `editJoin(parts list text, delim text) ? text`  
- `editReplace(s text, from text, to text) ? text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/nlpedit"  
use nlpedit
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? editLen(s text) ? number  
? editUpper(s text) ? text  
? editLower(s text) ? text  
? editTrim(s text) ? text  
? editSplit(s text, delim text) ? list  
? editJoin(parts list text, delim text) ? text  
? editReplace(s text, from text, to text) ? text
```

4. Exemples d'utilisation

```
import "std/c/nlpedit"  
use nlpedit  
  
create result = editLen(/* args */)   
say result  
  
create result = editUpper(/* args */)   
say result  
  
create result = editLower(/* args */)   
say result  
  
create result = editTrim(/* args */)   
say result  
  
create result = editSplit(/* args */)   
say result  
  
create result = editJoin(/* args */)   
say result
```

5. Bonnes pratiques

```
? Préférez `import "std/c/nlpedit"` en tête de fichier.  
? Lancez `afrilang check` avant de livrer.  
? Combinez avec les modules stdlib de la même catégorie.  
? Voir /stdlib/ pour le source live et les démos playground.  
? Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe ? source

```
module nlpedit
```

```
function editLen(s text) returns number
end

function editUpper(s text) returns text
end

function editLower(s text) returns text
end

function editTrim(s text) returns text
end

function editSplit(s text, delim text) returns list text
end

function editJoin(parts list text, delim text) returns text
end

function editReplace(s text, from text, to text) returns text
end
end
```

ENGLISH

1. Overview

AFRILANG library ``std/c/nlpedit`` (tier complex, category complex). Exports 7 function(s): `editLen`, `editUpper`, `editLower`,

```
`import "std/c/nlpedit"` · `use nlpedit`  
- `editLen(s text) ? number`  
- `editUpper(s text) ? text`  
- `editLower(s text) ? text`  
- `editTrim(s text) ? text`  
- `editSplit(s text, delim text) ? list text`  
- `editJoin(parts list text, delim text) ? text`  
- `editReplace(s text, from text, to text) ? text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/nlpedit"  
use nlpedit
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? editLen(s text) ? number  
? editUpper(s text) ? text  
? editLower(s text) ? text  
? editTrim(s text) ? text  
? editSplit(s text, delim text) ? list  
? editJoin(parts list text, delim text) ? text  
? editReplace(s text, from text, to text) ? text
```

4. Usage examples

```
import "std/c/nlpedit"  
use nlpedit  
  
create result = editLen(/* args */)   
say result  
  
create result = editUpper(/* args */)   
say result  
  
create result = editLower(/* args */)   
say result  
  
create result = editTrim(/* args */)   
say result  
  
create result = editSplit(/* args */)   
say result  
  
create result = editJoin(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/nlpedit"` at the top of your file.  
? Run `afriLang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module nlpedit
```

```
function editLen(s text) returns number
end

function editUpper(s text) returns text
end

function editLower(s text) returns text
end

function editTrim(s text) returns text
end

function editSplit(s text, delim text) returns list text
end

function editJoin(parts list text, delim text) returns text
end

function editReplace(s text, from text, to text) returns text
end
end
```
