

AFRILANG Stdlib

std/c/nlptoken

Bibliothèque AFRILANG `std/c/nlptoken` (niveau complex, catégorie complex). Elle expose 7 fonction(s) :
tokeLen, tokeUpp

```
`import "std/c/nlptoken" . `use nlptoken`
```

- `tokeLen(s text) ? number`
- `tokeUpper(s text) ? text`
- `tokeLower(s text) ? text`
- `tokeTrim(s text) ? text`
- `tokeSplit(s text, delim text) ? list text`
- `tokeJoin(parts list text, delim text) ? text`
- `tokeReplace(s text, from text, to text) ? text`

Category: complex | Tier: complex | Functions: 7

FRANCAIS

1. Vue d'ensemble

Bibliothèque AFRILANG `std/c/nlptoken` (niveau complex, catégorie complex). Elle expose 7 fonction(s) : `tokenLen`, `tokenUpp`

```
`import "std/c/nlptoken"` · `use nlptoken`  
- `tokenLen(s text) ? number`  
- `tokenUpper(s text) ? text`  
- `tokenLower(s text) ? text`  
- `tokenTrim(s text) ? text`  
- `tokenSplit(s text, delim text) ? list text`  
- `tokenJoin(parts list text, delim text) ? text`  
- `tokenReplace(s text, from text, to text) ? text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/nlptoken"  
use nlptoken
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés ? graphes, NLP, réseaux complexes.

3. Référence API

```
? tokenLen(s text) ? number  
? tokenUpper(s text) ? text  
? tokenLower(s text) ? text  
? tokenTrim(s text) ? text  
? tokenSplit(s text, delim text) ? list  
? tokenJoin(parts list text, delim text) ? text  
? tokenReplace(s text, from text, to text) ? text
```

4. Exemples d'utilisation

```
import "std/c/nlptoken"  
use nlptoken  
  
create result = tokenLen(/* args */)   
say result  
  
create result = tokenUpper(/* args */)   
say result  
  
create result = tokenLower(/* args */)   
say result  
  
create result = tokenTrim(/* args */)   
say result  
  
create result = tokenSplit(/* args */)   
say result  
  
create result = tokenJoin(/* args */)   
say result
```

5. Bonnes pratiques

```
? Préférez `import "std/c/nlptoken"` en tête de fichier.  
? Lancez `afrilang check` avant de livrer.  
? Combinez avec les modules stdlib de la même catégorie.  
? Voir /stdlib/ pour le source live et les démos playground.  
? Signalez les problèmes sur GitHub si une export manque.
```

6. Annexe ? source

```
module nlptoken
```

```
function tokeLen(s text) returns number
end

function tokeUpper(s text) returns text
end

function tokeLower(s text) returns text
end

function tokeTrim(s text) returns text
end

function tokeSplit(s text, delim text) returns list text
end

function tokeJoin(parts list text, delim text) returns text
end

function tokeReplace(s text, from text, to text) returns text
end
end
```

ENGLISH

1. Overview

AFRILANG library `std/c/nlptoken` (tier complex, category complex). Exports 7 function(s):
tokenLen, tokenUpper, tokenLower

```
`import "std/c/nlptoken"` . `use nlptoken`  
- `tokenLen(s text) ? number`  
- `tokenUpper(s text) ? text`  
- `tokenLower(s text) ? text`  
- `tokenTrim(s text) ? text`  
- `tokenSplit(s text, delim text) ? list text`  
- `tokenJoin(parts list text, delim text) ? text`  
- `tokenReplace(s text, from text, to text) ? text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/nlptoken"  
use nlptoken
```

Tier: complex · Category: Complex modules (c/)
Advanced domains ? graphs, NLP, complex networks.

3. API reference

```
? tokenLen(s text) ? number  
? tokenUpper(s text) ? text  
? tokenLower(s text) ? text  
? tokenTrim(s text) ? text  
? tokenSplit(s text, delim text) ? list  
? tokenJoin(parts list text, delim text) ? text  
? tokenReplace(s text, from text, to text) ? text
```

4. Usage examples

```
import "std/c/nlptoken"  
use nlptoken  
  
create result = tokenLen(/* args */)   
say result  
  
create result = tokenUpper(/* args */)   
say result  
  
create result = tokenLower(/* args */)   
say result  
  
create result = tokenTrim(/* args */)   
say result  
  
create result = tokenSplit(/* args */)   
say result  
  
create result = tokenJoin(/* args */)   
say result
```

5. Best practices

```
? Prefer `import "std/c/nlptoken"` at the top of your file.  
? Run `afriLang check` before shipping.  
? Combine with related stdlib modules from the same category.  
? See /stdlib/ for the live source and playground demos.  
? Report issues on GitHub if an export is missing or undocumented.
```

6. Appendix ? source

```
module nlptoken
```

```
function tokeLen(s text) returns number
end

function tokeUpper(s text) returns text
end

function tokeLower(s text) returns text
end

function tokeTrim(s text) returns text
end

function tokeSplit(s text, delim text) returns list text
end

function tokeJoin(parts list text, delim text) returns text
end

function tokeReplace(s text, from text, to text) returns text
end
end
```
