

AFRILANG Stdlib

std/c/csvlimit

Français. Bibliothèque AFRILANG 'std/c/csvlimit' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : limiSum, limiMean, limiMin, limiMax, limiVar, limiStd, limiNorm, filterGt.

```
'import "std/c/csvlimit"' · 'use csvlimit'
```

```
- 'limiSum(v list number) → number' - 'limiMean(v list number) → number' - 'limiMin(v list number) → number' - 'limiMax(v list number) → number' - 'limiVar(v list number) → number' - 'limiStd(v list number) → number' - 'limiNorm(v list number) → list number' - 'filterGt(col list number, threshold number) → list number'
```

English. AFRILANG library 'std/c/csvlimit' (tier complex, category complex). Exports 8 function(s): limiSum, limiMean, limiMin, limiMax, limiVar, limiStd, limiNorm, filterGt.

```
'import "std/c/csvlimit"' · 'use csvlimit'
```

```
- 'limiSum(v list number) → number' - 'limiMean(v list number) → number' - 'limiMin(v list number) → number' - 'limiMax(v list number) → number' - 'limiVar(v list number) → number' - 'limiStd(v list number) → number' - 'limiNorm(v list number) → list number' - 'filterGt(col list number, threshold number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/csvlimit' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : limiSum, limiMean, limiMin, limiMax, limiVar, limiStd, limiNorm, filterGt.

```
'import "std/c/csvlimit"' · 'use csvlimit'
```

```
- `limiSum(v list number) → number`
- `limiMean(v list number) → number`
- `limiMin(v list number) → number`
- `limiMax(v list number) → number`
- `limiVar(v list number) → number`
- `limiStd(v list number) → number`
- `limiNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvlimit"
use csvlimit
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- limiSum(v list number) → number•
limiMean(v list number) → number•
limiMin(v list number) → number•
limiMax(v list number) → number•
limiVar(v list number) → number•
limiStd(v list number) → number•
limiNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Exemples d'utilisation

```
import "std/c/csvlimit"
use csvlimit
```

```
create result = limiSum(/* args */)
say result
```

```
create result = limiMean(/* args */)
say result
```

```
create result = limiMin(/* args */)
say result
```

```
create result = limiMax(/* args */)
say result
```

```
create result = limiVar(/* args */)
say result
```

```
create result = limiStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez `import "std/c/csvlimit"` en tête de fichier.
- Lancez `afrilang check` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir /stdlib/ pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module csvlimit

```
function limiSum(v list number) returns number
end
```

```
function limiMean(v list number) returns number
end
```

```
function limiMin(v list number) returns number
end
```

```
function limiMax(v list number) returns number
end
```

```
function limiVar(v list number) returns number
end
```

```
function limiStd(v list number) returns number
end
```

```
function limiNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/csvlimit' (tier complex, category complex). Exports 8 function(s): limiSum, limiMean, limiMin, limiMax, limiVar, limiStd, limiNorm, filterGt.

'import "std/c/csvlimit"' · 'use csvlimit'

```
- `limiSum(v list number) → number`
- `limiMean(v list number) → number`
- `limiMin(v list number) → number`
- `limiMax(v list number) → number`
- `limiVar(v list number) → number`
- `limiStd(v list number) → number`
- `limiNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvlimit"
use csvlimit
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- limiSum(v list number) → number•
limiMean(v list number) → number•
limiMin(v list number) → number•
limiMax(v list number) → number•
limiVar(v list number) → number•
limiStd(v list number) → number•
limiNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Usage examples

```
import "std/c/csvlimit"
use csvlimit
```

```
create result = limiSum(/* args */)
say result
```

```
create result = limiMean(/* args */)
say result
```

```
create result = limiMin(/* args */)
say result
```

```
create result = limiMax(/* args */)
say result
```

```
create result = limiVar(/* args */)
say result
```

```
create result = limiStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/csvlimit"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module csvlimit

```
function limiSum(v list number) returns number
end
```

```
function limiMean(v list number) returns number
end
```

```
function limiMin(v list number) returns number
end
```

```
function limiMax(v list number) returns number
end
```

```
function limiVar(v list number) returns number
end
```

```
function limiStd(v list number) returns number
end
```

```
function limiNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/csvlimit"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/csvlimit/>

Source (extrait)

```
module csvlimit

function limiSum(v list number) returns number
end

function limiMean(v list number) returns number
end

function limiMin(v list number) returns number
end

function limiMax(v list number) returns number
end

function limiVar(v list number) returns number
end

function limiStd(v list number) returns number
end

function limiNorm(v list number) returns list number
end

function filterGt(col list number, threshold number) returns list number
