

AFRILANG Stdlib

std/c/csvunion

Français. Bibliothèque AFRILANG 'std/c/csvunion' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : unioSum, unioMean, unioMin, unioMax, unioVar, unioStd, unioNorm, filterGt.

```
'import "std/c/csvunion"' · 'use csvunion'
```

- 'unioSum(v list number) → number' - 'unioMean(v list number) → number' - 'unioMin(v list number) → number' - 'unioMax(v list number) → number' - 'unioVar(v list number) → number' - 'unioStd(v list number) → number' - 'unioNorm(v list number) → list number' - 'filterGt(col list number, threshold number) → list number'

English. AFRILANG library 'std/c/csvunion' (tier complex, category complex). Exports 8 function(s): unioSum, unioMean, unioMin, unioMax, unioVar, unioStd, unioNorm, filterGt.

```
'import "std/c/csvunion"' · 'use csvunion'
```

- 'unioSum(v list number) → number' - 'unioMean(v list number) → number' - 'unioMin(v list number) → number' - 'unioMax(v list number) → number' - 'unioVar(v list number) → number' - 'unioStd(v list number) → number' - 'unioNorm(v list number) → list number' - 'filterGt(col list number, threshold number) → list number'

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/csvunion' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : unioSum, unioMean, unioMin, unioMax, unioVar, unioStd, unioNorm, filterGt.

```
'import "std/c/csvunion"' · 'use csvunion'
```

```
- `unioSum(v list number) → number`
- `unioMean(v list number) → number`
- `unioMin(v list number) → number`
- `unioMax(v list number) → number`
- `unioVar(v list number) → number`
- `unioStd(v list number) → number`
- `unioNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvunion"
use csvunion
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- unioSum(v list number) → number•
unioMean(v list number) → number•
unioMin(v list number) → number•
unioMax(v list number) → number•
unioVar(v list number) → number•
unioStd(v list number) → number•
unioNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Exemples d'utilisation

```
import "std/c/csvunion"
use csvunion
```

```
create result = unioSum(/* args */)
say result
```

```
create result = unioMean(/* args */)
say result
```

```
create result = unioMin(/* args */)
say result
```

```
create result = unioMax(/* args */)
say result
```

```
create result = unioVar(/* args */)
say result
```

```
create result = unioStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/csvunion"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module csvunion

```
function unioSum(v list number) returns number
end
```

```
function unioMean(v list number) returns number
end
```

```
function unioMin(v list number) returns number
end
```

```
function unioMax(v list number) returns number
end
```

```
function unioVar(v list number) returns number
end
```

```
function unioStd(v list number) returns number
end
```

```
function unioNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/csvunion' (tier complex, category complex). Exports 8 function(s): unioSum, unioMean, unioMin, unioMax, unioVar, unioStd, unioNorm, filterGt.

```
'import "std/c/csvunion"' · 'use csvunion'
```

```
- `unioSum(v list number) → number`
- `unioMean(v list number) → number`
- `unioMin(v list number) → number`
- `unioMax(v list number) → number`
- `unioVar(v list number) → number`
- `unioStd(v list number) → number`
- `unioNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvunion"
use csvunion
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- unioSum(v list number) → number•
unioMean(v list number) → number•
unioMin(v list number) → number•
unioMax(v list number) → number•
unioVar(v list number) → number•
unioStd(v list number) → number•
unioNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Usage examples

```
import "std/c/csvunion"
use csvunion
```

```
create result = unioSum(/* args */)
say result
```

```
create result = unioMean(/* args */)
say result
```

```
create result = unioMin(/* args */)
say result
```

```
create result = unioMax(/* args */)
say result
```

```
create result = unioVar(/* args */)
say result
```

```
create result = unioStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/csvunion"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module csvunion

```
function unioSum(v list number) returns number
end
```

```
function unioMean(v list number) returns number
end
```

```
function unioMin(v list number) returns number
end
```

```
function unioMax(v list number) returns number
end
```

```
function unioVar(v list number) returns number
end
```

```
function unioStd(v list number) returns number
end
```

```
function unioNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/csvunion"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/csvunion/>

Source (extrait)

```
module csvunion

function unioSum(v list number) returns number
end

function unioMean(v list number) returns number
end

function unioMin(v list number) returns number
