

AFRILANG Stdlib

std/c/finblack

Français. Bibliothèque AFRILANG 'std/c/finblack' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : blacSum, blacMean, blacMin, blacMax, blacVar, blacStd, blacNorm.

```
'import "std/c/finblack"' · 'use finblack'
```

```
- 'blacSum(v list number) → number' - 'blacMean(v list number) → number' - 'blacMin(v list number) → number' - 'blacMax(v list number) → number' - 'blacVar(v list number) → number' - 'blacStd(v list number) → number' - 'blacNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/finblack' (tier complex, category complex). Exports 7 function(s): blacSum, blacMean, blacMin, blacMax, blacVar, blacStd, blacNorm.

```
'import "std/c/finblack"' · 'use finblack'
```

```
- 'blacSum(v list number) → number' - 'blacMean(v list number) → number' - 'blacMin(v list number) → number' - 'blacMax(v list number) → number' - 'blacVar(v list number) → number' - 'blacStd(v list number) → number' - 'blacNorm(v list number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/finblack' (niveau complexe, catégorie complexe). Elle expose 7 fonction(s) : blacSum, blacMean, blacMin, blacMax, blacVar, blacStd, blacNorm.

```
'import "std/c/finblack"' · 'use finblack'
```

```
- `blacSum(v list number) → number`
- `blacMean(v list number) → number`
- `blacMin(v list number) → number`
- `blacMax(v list number) → number`
- `blacVar(v list number) → number`
- `blacStd(v list number) → number`
- `blacNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finblack"
use finblack
```

Niveau : complexe · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- blacSum(v list number) → number•
blacMean(v list number) → number•
blacMin(v list number) → number•
blacMax(v list number) → number•
blacVar(v list number) → number•
blacStd(v list number) → number•
blacNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/finblack"
use finblack
```

```
create result = blacSum(/* args */)
say result
```

```
create result = blacMean(/* args */)
say result
```

```
create result = blacMin(/* args */)
say result
```

```
create result = blacMax(/* args */)
say result
```

```
create result = blacVar(/* args */)
say result
```

```
create result = blacStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/finblack"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module finblack

```
function blacSum(v list number) returns number
end
```

```
function blacMean(v list number) returns number
end
```

```
function blacMin(v list number) returns number
end
```

```
function blacMax(v list number) returns number
end
```

```
function blacVar(v list number) returns number
end
```

```
function blacStd(v list number) returns number
end
```

```
function blacNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/finblack' (tier complex, category complex). Exports 7 function(s): blacSum, blacMean, blacMin, blacMax, blacVar, blacStd, blacNorm.

'import "std/c/finblack"' · 'use finblack'

```
- `blacSum(v list number) → number`
- `blacMean(v list number) → number`
- `blacMin(v list number) → number`
- `blacMax(v list number) → number`
- `blacVar(v list number) → number`
- `blacStd(v list number) → number`
- `blacNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finblack"
use finblack
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- - blacSum(v list number) → number•
 - blacMean(v list number) → number•
 - blacMin(v list number) → number•
 - blacMax(v list number) → number•
 - blacVar(v list number) → number•
 - blacStd(v list number) → number•
 - blacNorm(v list number) → list

4. Usage examples

```
import "std/c/finblack"
use finblack
```

```
create result = blacSum(/* args */)
say result
```

```
create result = blacMean(/* args */)
say result
```

```
create result = blacMin(/* args */)
say result
```

```
create result = blacMax(/* args */)
say result
```

```
create result = blacVar(/* args */)
say result
```

```
create result = blacStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/finblack"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module finblack

```
function blacSum(v list number) returns number
end
```

```
function blacMean(v list number) returns number
end
```

```
function blacMin(v list number) returns number
end
```

```
function blacMax(v list number) returns number
end
```

```
function blacVar(v list number) returns number
end
```

```
function blacStd(v list number) returns number
end
```

```
function blacNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/finblack"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/finblack/>
