

AFRILANG Stdlib

std/c/finfutures

Français. Bibliothèque AFRILANG 'std/c/finfutures' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : futuSum, futuMean, futuMin, futuMax, futuVar, futuStd, futuNorm.

```
'import "std/c/finfutures"' · 'use finfutures'
```

```
- 'futuSum(v list number) → number' - 'futuMean(v list number) → number' - 'futuMin(v list number) → number' - 'futuMax(v list number) → number' - 'futuVar(v list number) → number' - 'futuStd(v list number) → number' - 'futuNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/finfutures' (tier complex, category complex). Exports 7 function(s): futuSum, futuMean, futuMin, futuMax, futuVar, futuStd, futuNorm.

```
'import "std/c/finfutures"' · 'use finfutures'
```

```
- 'futuSum(v list number) → number' - 'futuMean(v list number) → number' - 'futuMin(v list number) → number' - 'futuMax(v list number) → number' - 'futuVar(v list number) → number' - 'futuStd(v list number) → number' - 'futuNorm(v list number) → list number'
```

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/finfutures' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : futuSum, futuMean, futuMin, futuMax, futuVar, futuStd, futuNorm.

```
'import "std/c/finfutures"' · 'use finfutures'
```

```
- `futuSum(v list number) → number`
- `futuMean(v list number) → number`
- `futuMin(v list number) → number`
- `futuMax(v list number) → number`
- `futuVar(v list number) → number`
- `futuStd(v list number) → number`
- `futuNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finfutures"
use finfutures
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- futuSum(v list number) → number•
futuMean(v list number) → number•
futuMin(v list number) → number•
futuMax(v list number) → number•
futuVar(v list number) → number•
futuStd(v list number) → number•
futuNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/finfutures"
use finfutures
```

```
create result = futuSum(/* args */)
say result
```

```
create result = futuMean(/* args */)
say result
```

```
create result = futuMin(/* args */)
say result
```

```
create result = futuMax(/* args */)
say result
```

```
create result = futuVar(/* args */)
say result
```

```
create result = futuStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/finfutures"`` en tête de fichier.
- Lancez ``afri-lang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module finfutures

```
function futuSum(v list number) returns number
end
```

```
function futuMean(v list number) returns number
end
```

```
function futuMin(v list number) returns number
end
```

```
function futuMax(v list number) returns number
end
```

```
function futuVar(v list number) returns number
end
```

```
function futuStd(v list number) returns number
end
```

```
function futuNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/finfutures' (tier complex, category complex). Exports 7 function(s): futuSum, futuMean, futuMin, futuMax, futuVar, futuStd, futuNorm.

'import "std/c/finfutures"' · 'use finfutures'

```
- `futuSum(v list number) → number`  
- `futuMean(v list number) → number`  
- `futuMin(v list number) → number`  
- `futuMax(v list number) → number`  
- `futuVar(v list number) → number`  
- `futuStd(v list number) → number`  
- `futuNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finfutures"  
use finfutures
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- futuSum(v list number) → number•
futuMean(v list number) → number•
futuMin(v list number) → number•
futuMax(v list number) → number•
futuVar(v list number) → number•
futuStd(v list number) → number•
futuNorm(v list number) → list

4. Usage examples

```
import "std/c/finfutures"  
use finfutures
```

```
create result = futuSum(/* args */)   
say result
```

```
create result = futuMean(/* args */)   
say result
```

```
create result = futuMin(/* args */)   
say result
```

```
create result = futuMax(/* args */)   
say result
```

```
create result = futuVar(/* args */)   
say result
```

```
create result = futuStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/finfutures"`` at the top of your file.
- Run ``afriLang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module finfutures

```
function futuSum(v list number) returns number
end
```

```
function futuMean(v list number) returns number
end
```

```
function futuMin(v list number) returns number
end
```

```
function futuMax(v list number) returns number
end
```

```
function futuVar(v list number) returns number
end
```

```
function futuStd(v list number) returns number
end
```

```
function futuNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/finfutures"`
- Vérification : `afriLang check`
- Documentation : <https://afriLang.dev/stdlib/std/c/finfutures/>

Source (extrait)

```
