

AFRILANG Stdlib

std/c/fingreeks

Français. Bibliothèque AFRILANG 'std/c/fingreeks' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : greeSum, greeMean, greeMin, greeMax, greeVar, greeStd, greeNorm.

```
'import "std/c/fingreeks"' · 'use fingreeks'
```

```
- 'greeSum(v list number) → number' - 'greeMean(v list number) → number' - 'greeMin(v list number) → number' - 'greeMax(v list number) → number' - 'greeVar(v list number) → number' - 'greeStd(v list number) → number' - 'greeNorm(v list number) → list number'
```

English.

AFRILANG library 'std/c/fingreeks' (tier complex, category complex). Exports 7 function(s): greeSum, greeMean, greeMin, greeMax, greeVar, greeStd, greeNorm.

```
'import "std/c/fingreeks"' · 'use fingreeks'
```

```
- 'greeSum(v list number) → number' - 'greeMean(v list number) → number' - 'greeMin(v list number) → number' - 'greeMax(v list number) → number' - 'greeVar(v list number) → number' - 'greeStd(v list number) → number' - 'greeNorm(v list number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/fingreeks' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : greeSum, greeMean, greeMin, greeMax, greeVar, greeStd, greeNorm.

```
'import "std/c/fingreeks"' · 'use fingreeks'
```

```
- `greeSum(v list number) → number`
- `greeMean(v list number) → number`
- `greeMin(v list number) → number`
- `greeMax(v list number) → number`
- `greeVar(v list number) → number`
- `greeStd(v list number) → number`
- `greeNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/fingreeks"
use fingreeks
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- greeSum(v list number) → number•
greeMean(v list number) → number•
greeMin(v list number) → number•
greeMax(v list number) → number•
greeVar(v list number) → number•
greeStd(v list number) → number•
greeNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/fingreeks"
use fingreeks
```

```
create result = greeSum(/* args */)
say result
```

```
create result = greeMean(/* args */)
say result
```

```
create result = greeMin(/* args */)
say result
```

```
create result = greeMax(/* args */)
say result
```

```
create result = greeVar(/* args */)
say result
```

```
create result = greeStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/fingreeks"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module fingreeks

```
function greeSum(v list number) returns number
end
```

```
function greeMean(v list number) returns number
end
```

```
function greeMin(v list number) returns number
end
```

```
function greeMax(v list number) returns number
end
```

```
function greeVar(v list number) returns number
end
```

```
function greeStd(v list number) returns number
end
```

```
function greeNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/fingreeks' (tier complex, category complex). Exports 7 function(s): greeSum, greeMean, greeMin, greeMax, greeVar, greeStd, greeNorm.

'import "std/c/fingreeks"' · 'use fingreeks'

```
- `greeSum(v list number) → number`  
- `greeMean(v list number) → number`  
- `greeMin(v list number) → number`  
- `greeMax(v list number) → number`  
- `greeVar(v list number) → number`  
- `greeStd(v list number) → number`  
- `greeNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/fingreeks"  
use fingreeks
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- greeSum(v list number) → number•
greeMean(v list number) → number•
greeMin(v list number) → number•
greeMax(v list number) → number•
greeVar(v list number) → number•
greeStd(v list number) → number•
greeNorm(v list number) → list

4. Usage examples

```
import "std/c/fingreeks"  
use fingreeks
```

```
create result = greeSum(/* args */)   
say result
```

```
create result = greeMean(/* args */)   
say result
```

```
create result = greeMin(/* args */)   
say result
```

```
create result = greeMax(/* args */)   
say result
```

```
create result = greeVar(/* args */)   
say result
```

```
create result = greeStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/fingreeks"`` at the top of your file.
- Run ``afriLang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module fingreeks

```
function greeSum(v list number) returns number
end
```

```
function greeMean(v list number) returns number
end
```

```
function greeMin(v list number) returns number
end
```

```
function greeMax(v list number) returns number
end
```

```
function greeVar(v list number) returns number
end
```

```
function greeStd(v list number) returns number
end
```

```
function greeNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/fingreeks"`
- Vérification : `afriLang check`
- Documentation : <https://afriLang.dev/stdlib/std/c/fingreeks/>
