

AFRILANG Stdlib

std/c/csvdistinct

Français. Bibliothèque AFRILANG 'std/c/csvdistinct' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : distSum, distMean, distMin, distMax, distVar, distStd, distNorm, filterGt.

```
'import "std/c/csvdistinct"' · 'use csvdistinct'  
- 'distSum(v list number) → number' - 'distMean(v list number) → num-  
ber' - 'distMin(v list number) → number' - 'distMax(v list number) →  
number' - 'distVar(v list number) → number' - 'distStd(v list number)  
→ number' - 'distNorm(v list number) → list number' - 'filterGt(col list  
number, threshold number) → list number'
```

English. AFRILANG library 'std/c/csvdistinct' (tier complex, category complex). Exports 8 function(s): distSum, distMean, distMin, distMax, distVar, distStd, distNorm, filterGt.

```
'import "std/c/csvdistinct"' · 'use csvdistinct'  
- 'distSum(v list number) → number' - 'distMean(v list number) → num-  
ber' - 'distMin(v list number) → number' - 'distMax(v list number) →  
number' - 'distVar(v list number) → number' - 'distStd(v list number)  
→ number' - 'distNorm(v list number) → list number' - 'filterGt(col list  
number, threshold number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/csvdistinct' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : distSum, distMean, distMin, distMax, distVar, distStd, distNorm, filterGt.

```
'import "std/c/csvdistinct"' · 'use csvdistinct'
```

```
- `distSum(v list number) → number`
- `distMean(v list number) → number`
- `distMin(v list number) → number`
- `distMax(v list number) → number`
- `distVar(v list number) → number`
- `distStd(v list number) → number`
- `distNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvdistinct"
use csvdistinct
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- distSum(v list number) → number•
distMean(v list number) → number•
distMin(v list number) → number•
distMax(v list number) → number•
distVar(v list number) → number•
distStd(v list number) → number•
distNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Exemples d'utilisation

```
import "std/c/csvdistinct"
use csvdistinct
```

```
create result = distSum(/* args */)
say result
```

```
create result = distMean(/* args */)
say result
```

```
create result = distMin(/* args */)
say result
```

```
create result = distMax(/* args */)
say result
```

```
create result = distVar(/* args */)
say result
```

```
create result = distStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/csvdistinct"`` en tête de fichier.
- Lancez ``afri-lang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module csvdistinct

```
function distSum(v list number) returns number
end
```

```
function distMean(v list number) returns number
end
```

```
function distMin(v list number) returns number
end
```

```
function distMax(v list number) returns number
end
```

```
function distVar(v list number) returns number
end
```

```
function distStd(v list number) returns number
end
```

```
function distNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/csvdistinct' (tier complex, category complex). Exports 8 function(s): distSum, distMean, distMin, distMax, distVar, distStd, distNorm, filterGt.

'import "std/c/csvdistinct"' · 'use csvdistinct'

```
- `distSum(v list number) → number`
- `distMean(v list number) → number`
- `distMin(v list number) → number`
- `distMax(v list number) → number`
- `distVar(v list number) → number`
- `distStd(v list number) → number`
- `distNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvdistinct"
use csvdistinct
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- distSum(v list number) → number•
distMean(v list number) → number•
distMin(v list number) → number•
distMax(v list number) → number•
distVar(v list number) → number•
distStd(v list number) → number•
distNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Usage examples

```
import "std/c/csvdistinct"
use csvdistinct
```

```
create result = distSum(/* args */)
say result
```

```
create result = distMean(/* args */)
say result
```

```
create result = distMin(/* args */)
say result
```

```
create result = distMax(/* args */)
say result
```

```
create result = distVar(/* args */)
say result
```

```
create result = distStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/csvdistinct"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module csvdistinct

```
function distSum(v list number) returns number
end
```

```
function distMean(v list number) returns number
end
```

```
function distMin(v list number) returns number
end
```

```
function distMax(v list number) returns number
end
```

```
function distVar(v list number) returns number
end
```

```
function distStd(v list number) returns number
end
```

```
function distNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/csvdistinct"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/csvdistinct/>

Source (excerpt)

```
module csvdistinct

function distSum(v list number) returns number
end

function distMean(v list number) returns number
end

function distMin(v list number) returns number
end

function distMax(v list number) returns number
end

function distVar(v list number) returns number
end

function distStd(v list number) returns number
end

function distNorm(v list number) returns list number
end

function filterGt(col list number, threshold number) returns list number
end
end
```
