

AFRILANG Stdlib

std/c/csvjoin

Français. Bibliothèque AFRILANG 'std/c/csvjoin' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : joinSum, joinMean, joinMin, joinMax, joinVar, joinStd, joinNorm, filterGt.

```
'import "std/c/csvjoin"' · 'use csvjoin'
```

```
- 'joinSum(v list number) → number' - 'joinMean(v list number) → number' - 'joinMin(v list number) → number' - 'joinMax(v list number) → number' - 'joinVar(v list number) → number' - 'joinStd(v list number) → number' - 'joinNorm(v list number) → list number' - 'filterGt(col list number, threshold number) → list number'
```

English. AFRILANG library 'std/c/csvjoin' (tier complex, category complex). Exports 8 function(s): joinSum, joinMean, joinMin, joinMax, joinVar, joinStd, joinNorm, filterGt.

```
'import "std/c/csvjoin"' · 'use csvjoin'
```

```
- 'joinSum(v list number) → number' - 'joinMean(v list number) → number' - 'joinMin(v list number) → number' - 'joinMax(v list number) → number' - 'joinVar(v list number) → number' - 'joinStd(v list number) → number' - 'joinNorm(v list number) → list number' - 'filterGt(col list number, threshold number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/csvjoin' (niveau complex, catégorie complex). Elle expose 8 fonction(s) : joinSum, joinMean, joinMin, joinMax, joinVar, joinStd, joinNorm, filterGt.

```
'import "std/c/csvjoin"' · 'use csvjoin'
```

```
- `joinSum(v list number) → number`
- `joinMean(v list number) → number`
- `joinMin(v list number) → number`
- `joinMax(v list number) → number`
- `joinVar(v list number) → number`
- `joinStd(v list number) → number`
- `joinNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/csvjoin"
use csvjoin
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- joinSum(v list number) → number•
joinMean(v list number) → number•
joinMin(v list number) → number•
joinMax(v list number) → number•
joinVar(v list number) → number•
joinStd(v list number) → number•
joinNorm(v list number) → list•
filterGt(col list number, threshold number) → list

4. Exemples d'utilisation

```
import "std/c/csvjoin"
use csvjoin
```

```
create result = joinSum(/* args */)
say result
```

```
create result = joinMean(/* args */)
say result
```

```
create result = joinMin(/* args */)
say result
```

```
create result = joinMax(/* args */)
say result
```

```
create result = joinVar(/* args */)
say result
```

```
create result = joinStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/csvjoin"`` en tête de fichier.
- Lancez ``afri-lang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module csvjoin

```
function joinSum(v list number) returns number
end
```

```
function joinMean(v list number) returns number
end
```

```
function joinMin(v list number) returns number
end
```

```
function joinMax(v list number) returns number
end
```

```
function joinVar(v list number) returns number
end
```

```
function joinStd(v list number) returns number
end
```

```
function joinNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/csvjoin' (tier complex, category complex). Exports 8 function(s): joinSum, joinMean, joinMin, joinMax, joinVar, joinStd, joinNorm, filterGt.

'import "std/c/csvjoin"' · 'use csvjoin'

```
- `joinSum(v list number) → number`
- `joinMean(v list number) → number`
- `joinMin(v list number) → number`
- `joinMax(v list number) → number`
- `joinVar(v list number) → number`
- `joinStd(v list number) → number`
- `joinNorm(v list number) → list number`
- `filterGt(col list number, threshold number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/csvjoin"
use csvjoin
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- - joinSum(v list number) → number•
 - joinMean(v list number) → number•
 - joinMin(v list number) → number•
 - joinMax(v list number) → number•
 - joinVar(v list number) → number•
 - joinStd(v list number) → number•
 - joinNorm(v list number) → list•
 - filterGt(col list number, threshold number) → list

4. Usage examples

```
import "std/c/csvjoin"
use csvjoin
```

```
create result = joinSum(/* args */)
say result
```

```
create result = joinMean(/* args */)
say result
```

```
create result = joinMin(/* args */)
say result
```

```
create result = joinMax(/* args */)
say result
```

```
create result = joinVar(/* args */)
say result
```

```
create result = joinStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/csvjoin"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module csvjoin

```
function joinSum(v list number) returns number
end
```

```
function joinMean(v list number) returns number
end
```

```
function joinMin(v list number) returns number
end
```

```
function joinMax(v list number) returns number
end
```

```
function joinVar(v list number) returns number
end
```

```
function joinStd(v list number) returns number
end
```

```
function joinNorm(v list number) returns list number
end
```

```
function filterGt(col list number, threshold number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/csvjoin"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/csvjoin/>

Source (excerpt)

```
module csvjoin

function joinSum(v list number) returns number
end

function joinMean(v list number) returns number
end

function joinMin(v list number) returns number
end

function joinMax(v list number) returns number
end

function joinVar(v list number) returns number
end

function joinStd(v list number) returns number
end

function joinNorm(v list number) returns list number
end

function filterGt(col list number, threshold number) returns list number
end
end
```
