1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/graphcent' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : degreeCentrality, closenessCentrality, betweennessApprox, eigenvectorCentrality, pageRank, hubScore, mostCentral.

'import "std/c/graphcent"' · 'use graphcent'

```
- `degreeCentrality(adj list number, n number) → list number`
- `closenessCentrality(adj list number, n number) → list number`
- `betweennessApprox(adj list number, n number) → list number`
- `eigenvectorCentrality(adj list number, n number) → list number`
- `pageRank(adj list number, n number, damping number) → list number`
- `hubScore(adj list number, n number) → list number`
- `mostCentral(adj list number, n number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/graphcent"
use graphcent
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- degreeCentrality(adj list number, n number) → list•
- closenessCentrality(adj list number, n number) → list•
- betweennessApprox(adj list number, n number) → list•
- eigenvectorCentrality(adj list number, n number) → list•
- pageRank(adj list number, n number, damping number) → list•
- hubScore(adj list number, n number) → list•
- mostCentral(adj list number, n number) → number

4. Exemples d'utilisation

```
import "std/c/graphcent"
use graphcent
```

```
create result = degreeCentrality(/* args */)
say result
```

```
create result = closenessCentrality(/* args */)
say result
```

```
create result = betweennessApprox(/* args */)
say result
```

```
create result = eigenvectorCentrality(/* args */)
say result
```

```
create result = pageRank(/* args */)
say result
```

```
create result = hubScore(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/graphcent"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module `graphcent`

```
function degreeCentrality(adj list number, n number) returns list number
end
```

```
function closenessCentrality(adj list number, n number) returns list number
end
```

```
function betweennessApprox(adj list number, n number) returns list number
end
```

```
function eigenvectorCentrality(adj list number, n number) returns list number
end
```

```
function pageRank(adj list number, n number, damping number) returns list number
end
```

```
function hubScore(adj list number, n number) returns list number
end
```

```
function mostCentral(adj list number, n number) returns number
end
end
```

English

1. Overview

AFRILANG library 'std/c/graphcent' (tier complex, category complex). Exports 7 function(s): degreeCentrality, closenessCentrality, betweennessApprox, eigenvectorCentrality, pageRank, hubScore, mostCentral.

'import "std/c/graphcent"' · 'use graphcent'

```
- `degreeCentrality(adj list number, n number) → list number`
- `closenessCentrality(adj list number, n number) → list number`
- `betweennessApprox(adj list number, n number) → list number`
- `eigenvectorCentrality(adj list number, n number) → list number`
- `pageRank(adj list number, n number, damping number) → list number`
- `hubScore(adj list number, n number) → list number`
- `mostCentral(adj list number, n number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/graphcent"
use graphcent
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- degreeCentrality(adj list number, n number) → list•
- closenessCentrality(adj list number, n number) → list•
- betweennessApprox(adj list number, n number) → list•
- eigenvectorCentrality(adj list number, n number) → list•
- pageRank(adj list number, n number, damping number) → list•
- hubScore(adj list number, n number) → list•
- mostCentral(adj list number, n number) → number

4. Usage examples

```
import "std/c/graphcent"
use graphcent
```

```
create result = degreeCentrality(/* args */)
say result
```

```
create result = closenessCentrality(/* args */)
say result
```

```
create result = betweennessApprox(/* args */)
say result
```

```
create result = eigenvectorCentrality(/* args */)
say result
```

```
create result = pageRank(/* args */)
say result
```

```
create result = hubScore(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/graphcent"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module graphcent

```
function degreeCentrality(adj list number, n number) returns list number
end
```

```
function closenessCentrality(adj list number, n number) returns list number
end
```

```
function betweennessApprox(adj list number, n number) returns list number
end
```

```
function eigenvectorCentrality(adj list number, n number) returns list number
end
```

```
function pageRank(adj list number, n number, damping number) returns list number
end
```

```
function hubScore(adj list number, n number) returns list number
end
```

```
function mostCentral(adj list number, n number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/graphcent"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/graphcent/>

Source (excerpt)

```
module graphcent

function degreeCentrality(adj list number, n number) returns list number
