1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/graphkruskal' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : `kruskalMst`, `kruskalEdges`, `unionFindComponents`, `edgeListSize`, `kruskalForestWeight`, `maxSpanningForest`, `compareKruskalPrim`.

'import "std/c/graphkruskal"' · 'use graphkruskal'

```
- `kruskalMst(adj list number, n number) → number`
- `kruskalEdges(adj list number, n number) → list number`
- `unionFindComponents(adj list number, n number) → number`
- `edgeListSize(adj list number, n number) → number`
- `kruskalForestWeight(adj list number, n number) → number`
- `maxSpanningForest(adj list number, n number) → number`
- `compareKruskalPrim(adj list number, n number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/graphkruskal"
use graphkruskal
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- `kruskalMst(adj list number, n number) → number`•
`kruskalEdges(adj list number, n number) → list`•
`unionFindComponents(adj list number, n number) → number`•
`edgeListSize(adj list number, n number) → number`•
`kruskalForestWeight(adj list number, n number) → number`•
`maxSpanningForest(adj list number, n number) → number`•
`compareKruskalPrim(adj list number, n number) → number`

4. Exemples d'utilisation

```
import "std/c/graphkruskal"
use graphkruskal
```

```
create result = kruskalMst(/* args */)
say result
```

```
create result = kruskalEdges(/* args */)
say result
```

```
create result = unionFindComponents(/* args */)
say result
```

```
create result = edgeListSize(/* args */)
say result
```

```
create result = kruskalForestWeight(/* args */)
say result
```

```
create result = maxSpanningForest(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/graphkruskal"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module graphkruskal

```
function kruskalMst(adj list number, n number) returns number
end
```

```
function kruskalEdges(adj list number, n number) returns list number
end
```

```
function unionFindComponents(adj list number, n number) returns number
end
```

```
function edgeListSize(adj list number, n number) returns number
end
```

```
function kruskalForestWeight(adj list number, n number) returns number
end
```

```
function maxSpanningForest(adj list number, n number) returns number
end
```

```
function compareKruskalPrim(adj list number, n number) returns number
end
end
```

English

1. Overview

AFRILANG library 'std/c/graphkruskal' (tier complex, category complex). Exports 7 function(s): kruskalMst, kruskalEdges, unionFindComponents, edgeListSize, kruskalForestWeight, maxSpanningForest, compareKruskalPrim.

'import "std/c/graphkruskal"' · 'use graphkruskal'

```
- `kruskalMst(adj list number, n number) → number`
- `kruskalEdges(adj list number, n number) → list number`
- `unionFindComponents(adj list number, n number) → number`
- `edgeListSize(adj list number, n number) → number`
- `kruskalForestWeight(adj list number, n number) → number`
- `maxSpanningForest(adj list number, n number) → number`
- `compareKruskalPrim(adj list number, n number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/graphkruskal"
use graphkruskal
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- kruskalMst(adj list number, n number) → number•
- kruskalEdges(adj list number, n number) → list•
- unionFindComponents(adj list number, n number) → number•
- edgeListSize(adj list number, n number) → number•
- kruskalForestWeight(adj list number, n number) → number•
- maxSpanningForest(adj list number, n number) → number•
- compareKruskalPrim(adj list number, n number) → number

4. Usage examples

```
import "std/c/graphkruskal"
use graphkruskal
```

```
create result = kruskalMst(/* args */)
say result
```

```
create result = kruskalEdges(/* args */)
say result
```

```
create result = unionFindComponents(/* args */)
say result
```

```
create result = edgeListSize(/* args */)
say result
```

```
create result = kruskalForestWeight(/* args */)
say result
```

```
create result = maxSpanningForest(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/graphkruskal"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module graphkruskal

```
function kruskalMst(adj list number, n number) returns number
end
```

```
function kruskalEdges(adj list number, n number) returns list number
end
```

```
function unionFindComponents(adj list number, n number) returns number
end
```

```
function edgeListSize(adj list number, n number) returns number
end
```

```
function kruskalForestWeight(adj list number, n number) returns number
end
```

```
function maxSpanningForest(adj list number, n number) returns number
end
```

```
function compareKruskalPrim(adj list number, n number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/graphkruskal"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/graphkruskal/>
