

AFRILANG Stdlib

std/c/complzw

Français. Bibliothèque AFRILANG 'std/c/complzw' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : lzwEncode, lzwDecode, lzwRatio, lzwSize, lzwCompressed, lzwRoundTrip.

```
'import "std/c/complzw"' · 'use complzw'
```

```
- 'lzwEncode(data list number) → list number' - 'lzwDecode(encoded list number) → list number' - 'lzwRatio(data list number) → number' - 'lzwSize(data list number) → number' - 'lzwCompressed(data list number) → number' - 'lzwRoundTrip(data list number) → bool'
```

English.

AFRILANG library 'std/c/complzw' (tier complex, category complex). Exports 6 function(s): lzwEncode, lzwDecode, lzwRatio, lzwSize, lzwCompressed, lzwRoundTrip.

```
'import "std/c/complzw"' · 'use complzw'
```

```
- 'lzwEncode(data list number) → list number' - 'lzwDecode(encoded list number) → list number' - 'lzwRatio(data list number) → number' - 'lzwSize(data list number) → number' - 'lzwCompressed(data list number) → number' - 'lzwRoundTrip(data list number) → bool'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/complzw' (niveau complex, catégorie complex). Elle expose 6 fonction(s) : lzwEncode, lzwDecode, lzwRatio, lzwSize, lzwCompressed, lzwRoundTrip.

'import "std/c/complzw"' · 'use complzw'

```
- `lzwEncode(data list number) → list number`
- `lzwDecode(encoded list number) → list number`
- `lzwRatio(data list number) → number`
- `lzwSize(data list number) → number`
- `lzwCompressed(data list number) → number`
- `lzwRoundTrip(data list number) → bool`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/complzw"
use complzw
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- lzwEncode(data list number) → list•
lzwDecode(encoded list number) → list•
lzwRatio(data list number) → number•
lzwSize(data list number) → number•
lzwCompressed(data list number) → number•
lzwRoundTrip(data list number) → bool

4. Exemples d'utilisation

```
import "std/c/complzw"
use complzw
```

```
create result = lzwEncode(/* args */)
say result
```

```
create result = lzwDecode(/* args */)
say result
```

```
create result = lzwRatio(/* args */)
say result
```

```
create result = lzwSize(/* args */)
say result
```

```
create result = lzwCompressed(/* args */)
say result
```

```
create result = lzwRoundTrip(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/complzw"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module complzw

```
function lzwEncode(data list number) returns list number  
end
```

```
function lzwDecode(encoded list number) returns list number  
end
```

```
function lzwRatio(data list number) returns number  
end
```

```
function lzwSize(data list number) returns number  
end
```

```
function lzwCompressed(data list number) returns number  
end
```

```
function lzwRoundTrip(data list number) returns bool  
end  
end
```

English

1. Overview

AFRILANG library 'std/c/complzw' (tier complex, category complex). Exports 6 function(s): lzwEncode, lzwDecode, lzwRatio, lzwSize, lzwCompressed, lzwRoundTrip.

'import "std/c/complzw"' · 'use complzw'

```
- `lzwEncode(data list number) → list number`
- `lzwDecode(encoded list number) → list number`
- `lzwRatio(data list number) → number`
- `lzwSize(data list number) → number`
- `lzwCompressed(data list number) → number`
- `lzwRoundTrip(data list number) → bool`
```

2. Installation & import

Add the module to your program:

```
import "std/c/complzw"
use complzw
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- lzwEncode(data list number) → list•
lzwDecode(encoded list number) → list•
lzwRatio(data list number) → number•
lzwSize(data list number) → number•
lzwCompressed(data list number) → number•
lzwRoundTrip(data list number) → bool

4. Usage examples

```
import "std/c/complzw"
use complzw
```

```
create result = lzwEncode(/* args */)
say result
```

```
create result = lzwDecode(/* args */)
say result
```

```
create result = lzwRatio(/* args */)
say result
```

```
create result = lzwSize(/* args */)
say result
```

```
create result = lzwCompressed(/* args */)
say result
```

```
create result = lzwRoundTrip(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/complzw"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module complzw

```
function lzwEncode(data list number) returns list number
end
```

```
function lzwDecode(encoded list number) returns list number
end
```

```
function lzwRatio(data list number) returns number
end
```

```
function lzwSize(data list number) returns number
end
```

```
function lzwCompressed(data list number) returns number
end
```

```
function lzwRoundTrip(data list number) returns bool
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/complzw"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/complzw/>

Source (extrait)

```
module complzw

function lzwEncode(data list number) returns list number
end

function lzwDecode(encoded list number) returns list number
end

function lzwRatio(data list number) returns number
end

function lzwSize(data list number) returns number
end

function lzwCompressed(data list number) returns number
```

```
end
function lzwRoundTrip(data list number) returns bool
end
end
```
