1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/finswap' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : swapSum, swapMean, swapMin, swapMax, swapVar, swapStd, swapNorm.

'import "std/c/finswap"' · 'use finswap'

```
- `swapSum(v list number) → number`
- `swapMean(v list number) → number`
- `swapMin(v list number) → number`
- `swapMax(v list number) → number`
- `swapVar(v list number) → number`
- `swapStd(v list number) → number`
- `swapNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finswap"
use finswap
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- swapSum(v list number) → number•
- swapMean(v list number) → number•
- swapMin(v list number) → number•
- swapMax(v list number) → number•
- swapVar(v list number) → number•
- swapStd(v list number) → number•
- swapNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/finswap"
use finswap
```

```
create result = swapSum(/* args */)
say result
```

```
create result = swapMean(/* args */)
say result
```

```
create result = swapMin(/* args */)
say result
```

```
create result = swapMax(/* args */)
say result
```

```
create result = swapVar(/* args */)
say result
```

```
create result = swapStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/finswap"`` en tête de fichier.
- Lancez ``afri-lang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module finswap

```
function swapSum(v list number) returns number
end
```

```
function swapMean(v list number) returns number
end
```

```
function swapMin(v list number) returns number
end
```

```
function swapMax(v list number) returns number
end
```

```
function swapVar(v list number) returns number
end
```

```
function swapStd(v list number) returns number
end
```

```
function swapNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/finswap' (tier complex, category complex). Exports 7 function(s): swapSum, swapMean, swapMin, swapMax, swapVar, swapStd, swapNorm.

'import "std/c/finswap"' · 'use finswap'

```
- `swapSum(v list number) → number`
- `swapMean(v list number) → number`
- `swapMin(v list number) → number`
- `swapMax(v list number) → number`
- `swapVar(v list number) → number`
- `swapStd(v list number) → number`
- `swapNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finswap"
use finswap
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- - swapSum(v list number) → number
 - swapMean(v list number) → number
 - swapMin(v list number) → number
 - swapMax(v list number) → number
 - swapVar(v list number) → number
 - swapStd(v list number) → number
 - swapNorm(v list number) → list

4. Usage examples

```
import "std/c/finswap"
use finswap
```

```
create result = swapSum(/* args */)
say result
```

```
create result = swapMean(/* args */)
say result
```

```
create result = swapMin(/* args */)
say result
```

```
create result = swapMax(/* args */)
say result
```

```
create result = swapVar(/* args */)
say result
```

```
create result = swapStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/finswap"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module finswap

```
function swapSum(v list number) returns number
end
```

```
function swapMean(v list number) returns number
end
```

```
function swapMin(v list number) returns number
end
```

```
function swapMax(v list number) returns number
end
```

```
function swapVar(v list number) returns number
end
```

```
function swapStd(v list number) returns number
end
```

```
function swapNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/finswap"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/finswap/>

Source (extrait)

```
module finswap

function swapSum(v list number) returns number
end

function swapMean(v list number) returns number
```

```
end

function swapMin(v list number) returns number
end

function swapMax(v list number) returns number
end

function swapVar(v list number) returns number
end

function swapStd(v list number) returns number
end

function swapNorm(v list number) returns list number
end
end
```
