

AFRILANG Stdlib

std/c/finvar

Français. Bibliothèque AFRILANG 'std/c/finvar' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : varSum, varMean, varMin, varMax, varVar, varStd, varNorm.

```
'import "std/c/finvar"' · 'use finvar'
```

```
- 'varSum(v list number) → number' - 'varMean(v list number) → number' - 'varMin(v list number) → number' - 'varMax(v list number) → number' - 'varVar(v list number) → number' - 'varStd(v list number) → number' - 'varNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/finvar' (tier complex, category complex). Exports 7 function(s): varSum, varMean, varMin, varMax, varVar, varStd, varNorm.

```
'import "std/c/finvar"' · 'use finvar'
```

```
- 'varSum(v list number) → number' - 'varMean(v list number) → number' - 'varMin(v list number) → number' - 'varMax(v list number) → number' - 'varVar(v list number) → number' - 'varStd(v list number) → number' - 'varNorm(v list number) → list number'
```

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/finvar' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : varSum, varMean, varMin, varMax, varVar, varStd, varNorm.

'import "std/c/finvar"' · 'use finvar'

```
- `varSum(v list number) → number`
- `varMean(v list number) → number`
- `varMin(v list number) → number`
- `varMax(v list number) → number`
- `varVar(v list number) → number`
- `varStd(v list number) → number`
- `varNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finvar"
use finvar
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- varSum(v list number) → number•
varMean(v list number) → number•
varMin(v list number) → number•
varMax(v list number) → number•
varVar(v list number) → number•
varStd(v list number) → number•
varNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/finvar"
use finvar
```

```
create result = varSum(/* args */)
say result
```

```
create result = varMean(/* args */)
say result
```

```
create result = varMin(/* args */)
say result
```

```
create result = varMax(/* args */)
say result
```

```
create result = varVar(/* args */)
say result
```

```
create result = varStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/finvar"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module finvar

```
function varSum(v list number) returns number
end
```

```
function varMean(v list number) returns number
end
```

```
function varMin(v list number) returns number
end
```

```
function varMax(v list number) returns number
end
```

```
function varVar(v list number) returns number
end
```

```
function varStd(v list number) returns number
end
```

```
function varNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/finvar' (tier complex, category complex). Exports 7 function(s): varSum, varMean, varMin, varMax, varVar, varStd, varNorm.

'import "std/c/finvar"' · 'use finvar'

```
- `varSum(v list number) → number`
- `varMean(v list number) → number`
- `varMin(v list number) → number`
- `varMax(v list number) → number`
- `varVar(v list number) → number`
- `varStd(v list number) → number`
- `varNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finvar"
use finvar
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- varSum(v list number) → number•
varMean(v list number) → number•
varMin(v list number) → number•
varMax(v list number) → number•
varVar(v list number) → number•
varStd(v list number) → number•
varNorm(v list number) → list

4. Usage examples

```
import "std/c/finvar"
use finvar
```

```
create result = varSum(/* args */)
say result
```

```
create result = varMean(/* args */)
say result
```

```
create result = varMin(/* args */)
say result
```

```
create result = varMax(/* args */)
say result
```

```
create result = varVar(/* args */)
say result
```

```
create result = varStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/finvar"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module finvar

```
function varSum(v list number) returns number
end
```

```
function varMean(v list number) returns number
end
```

```
function varMin(v list number) returns number
end
```

```
function varMax(v list number) returns number
end
```

```
function varVar(v list number) returns number
end
```

```
function varStd(v list number) returns number
end
```

```
function varNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/finvar"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/finvar/>
