

AFRILANG Stdlib

std/c/finyield

Français. Bibliothèque AFRILANG 'std/c/finyield' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : yielSum, yielMean, yielMin, yielMax, yielVar, yielStd, yielNorm.

```
'import "std/c/finyield"' · 'use finyield'
```

```
- 'yielSum(v list number) → number' - 'yielMean(v list number) → number' - 'yielMin(v list number) → number' - 'yielMax(v list number) → number' - 'yielVar(v list number) → number' - 'yielStd(v list number) → number' - 'yielNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/finyield' (tier complex, category complex). Exports 7 function(s): yielSum, yielMean, yielMin, yielMax, yielVar, yielStd, yielNorm.

```
'import "std/c/finyield"' · 'use finyield'
```

```
- 'yielSum(v list number) → number' - 'yielMean(v list number) → number' - 'yielMin(v list number) → number' - 'yielMax(v list number) → number' - 'yielVar(v list number) → number' - 'yielStd(v list number) → number' - 'yielNorm(v list number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/finyield' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : yielSum, yielMean, yielMin, yielMax, yielVar, yielStd, yielNorm.

```
'import "std/c/finyield"' · 'use finyield'
```

```
- `yielSum(v list number) → number`
- `yielMean(v list number) → number`
- `yielMin(v list number) → number`
- `yielMax(v list number) → number`
- `yielVar(v list number) → number`
- `yielStd(v list number) → number`
- `yielNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/finyield"
use finyield
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- yielSum(v list number) → number•
yielMean(v list number) → number•
yielMin(v list number) → number•
yielMax(v list number) → number•
yielVar(v list number) → number•
yielStd(v list number) → number•
yielNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/finyield"
use finyield
```

```
create result = yielSum(/* args */)
say result
```

```
create result = yielMean(/* args */)
say result
```

```
create result = yielMin(/* args */)
say result
```

```
create result = yielMax(/* args */)
say result
```

```
create result = yielVar(/* args */)
say result
```

```
create result = yielStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/finyield"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module finyield

```
function yielSum(v list number) returns number
end
```

```
function yielMean(v list number) returns number
end
```

```
function yielMin(v list number) returns number
end
```

```
function yielMax(v list number) returns number
end
```

```
function yielVar(v list number) returns number
end
```

```
function yielStd(v list number) returns number
end
```

```
function yielNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/finyield' (tier complex, category complex). Exports 7 function(s): yielSum, yielMean, yielMin, yielMax, yielVar, yielStd, yielNorm.

'import "std/c/finyield"' · 'use finyield'

```
- `yelSum(v list number) → number`
- `yelMean(v list number) → number`
- `yelMin(v list number) → number`
- `yelMax(v list number) → number`
- `yelVar(v list number) → number`
- `yelStd(v list number) → number`
- `yelNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/finyield"
use finyield
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- yelSum(v list number) → number•
yelMean(v list number) → number•
yelMin(v list number) → number•
yelMax(v list number) → number•
yelVar(v list number) → number•
yelStd(v list number) → number•
yelNorm(v list number) → list

4. Usage examples

```
import "std/c/finyield"
use finyield
```

```
create result = yielSum(/* args */)
say result
```

```
create result = yielMean(/* args */)
say result
```

```
create result = yielMin(/* args */)
say result
```

```
create result = yielMax(/* args */)
say result
```

```
create result = yielVar(/* args */)
say result
```

```
create result = yielStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/finyield"`` at the top of your file.
- Run ``afriLang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module finyield

```
function yielSum(v list number) returns number
end
```

```
function yielMean(v list number) returns number
end
```

```
function yielMin(v list number) returns number
end
```

```
function yielMax(v list number) returns number
end
```

```
function yielVar(v list number) returns number
end
```

```
function yielStd(v list number) returns number
end
```

```
function yielNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/finyield"`
- Vérification : `afriLang check`
- Documentation : <https://afriLang.dev/stdlib/std/c/finyield/>

Source (extrait)

```
module finyield

function yielSum(v list number) returns number
end

function yielMean(v list number) returns number
```

```
end

function yielMin(v list number) returns number
end

function yielMax(v list number) returns number
end

function yielVar(v list number) returns number
end

function yielStd(v list number) returns number
end

function yielNorm(v list number) returns list number
