

AFRILANG Stdlib

std/absnum

Français. Bibliothèque AFRILANG 'std/absnum' (niveau simple, catégorie math). Elle expose 2 fonction(s) : absNumber, absDiff.

'import "std/absnum"' · 'use absnum'

- 'absNumber(n number) → number' - 'absDiff(a number, b number) → number'

English. AFRILANG library 'std/absnum' (tier simple, category math). Exports 2 function(s): absNumber, absDiff.

'import "std/absnum"' · 'use absnum'

- 'absNumber(n number) → number' - 'absDiff(a number, b number) → number'

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/absnum' (niveau simple, catégorie math). Elle expose 2 fonction(s) : `absNumber`, `absDiff`.

'import "std/absnum"' · 'use absnum'

```
- `absNumber(n number) → number`
- `absDiff(a number, b number) → number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/absnum"
use absnum
```

Niveau : simple · Catégorie : Mathématiques
Arithmétique, trigonométrie, statistiques, conversions.

3. Référence API

- `absNumber(n number) → number`
- `absDiff(a number, b number) → number`

4. Exemples d'utilisation

```
import "std/absnum"
use absnum
```

```
create result = absNumber(/* args */)
say result
```

```
create result = absDiff(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/absnum"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules `stdlib` de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module `absnum`

```
function absNumber(n number) returns number
end
```

```
function absDiff(a number, b number) returns number
end
end
```

English

1. Overview

AFRILANG library 'std/absnum' (tier simple, category math). Exports 2 function(s): absNumber, absDiff.

```
'import "std/absnum"' · 'use absnum'
```

```
- `absNumber(n number) → number`
- `absDiff(a number, b number) → number`
```

2. Installation & import

Add the module to your program:

```
import "std/absnum"
use absnum
```

Tier: simple · Category: Mathematics
Arithmetic, trigonometry, statistics, conversions.

3. API reference

- absNumber(n number) → number•
absDiff(a number, b number) → number

4. Usage examples

```
import "std/absnum"
use absnum
```

```
create result = absNumber(/* args */)
say result
```

```
create result = absDiff(/* args */)
say result
```

5. Best practices

- Prefer `import "std/absnum"` at the top of your file. •
Run `afriLang check` before shipping. •
Combine with related stdlib modules from the same category. •
See /stdlib/ for the live source and playground demos. •
Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module absnum

```
function absNumber(n number) returns number
end
```

```
function absDiff(a number, b number) returns number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/absnum"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/absnum/>

Source (extrait)

```
module absnum

function absNumber(n number) returns number
end

function absDiff(a number, b number) returns number
end
end
```
