

AFRILANG Stdlib

std/c/mlentropy

Français. Bibliothèque AFRILANG 'std/c/mlentropy' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : entrSum, entrMean, entrMin, entrMax, entrVar, entrStd, entrNorm.

```
'import "std/c/mlentropy"' · 'use mlentropy'
```

```
- 'entrSum(v list number) → number' - 'entrMean(v list number) → number' - 'entrMin(v list number) → number' - 'entrMax(v list number) → number' - 'entrVar(v list number) → number' - 'entrStd(v list number) → number' - 'entrNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/mlentropy' (tier complex, category complex). Exports 7 function(s): entrSum, entrMean, entrMin, entrMax, entrVar, entrStd, entrNorm.

```
'import "std/c/mlentropy"' · 'use mlentropy'
```

```
- 'entrSum(v list number) → number' - 'entrMean(v list number) → number' - 'entrMin(v list number) → number' - 'entrMax(v list number) → number' - 'entrVar(v list number) → number' - 'entrStd(v list number) → number' - 'entrNorm(v list number) → list number'
```

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/mlentropy' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : entrSum, entrMean, entrMin, entrMax, entrVar, entrStd, entrNorm.

```
'import "std/c/mlentropy"' · 'use mlentropy'
```

```
- `entrSum(v list number) → number`
- `entrMean(v list number) → number`
- `entrMin(v list number) → number`
- `entrMax(v list number) → number`
- `entrVar(v list number) → number`
- `entrStd(v list number) → number`
- `entrNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/mlentropy"
use mlentropy
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- entrSum(v list number) → number•
entrMean(v list number) → number•
entrMin(v list number) → number•
entrMax(v list number) → number•
entrVar(v list number) → number•
entrStd(v list number) → number•
entrNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/mlentropy"
use mlentropy
```

```
create result = entrSum(/* args */)
say result
```

```
create result = entrMean(/* args */)
say result
```

```
create result = entrMin(/* args */)
say result
```

```
create result = entrMax(/* args */)
say result
```

```
create result = entrVar(/* args */)
say result
```

```
create result = entrStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/mlentropy"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module mlentropy

```
function entrSum(v list number) returns number
end
```

```
function entrMean(v list number) returns number
end
```

```
function entrMin(v list number) returns number
end
```

```
function entrMax(v list number) returns number
end
```

```
function entrVar(v list number) returns number
end
```

```
function entrStd(v list number) returns number
end
```

```
function entrNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/mlentropy' (tier complex, category complex). Exports 7 function(s): entrSum, entrMean, entrMin, entrMax, entrVar, entrStd, entrNorm.

```
'import "std/c/mlentropy"' · 'use mlentropy'
```

```
- `entrSum(v list number) → number`  
- `entrMean(v list number) → number`  
- `entrMin(v list number) → number`  
- `entrMax(v list number) → number`  
- `entrVar(v list number) → number`  
- `entrStd(v list number) → number`  
- `entrNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/mlentropy"  
use mlentropy
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- entrSum(v list number) → number•
entrMean(v list number) → number•
entrMin(v list number) → number•
entrMax(v list number) → number•
entrVar(v list number) → number•
entrStd(v list number) → number•
entrNorm(v list number) → list

4. Usage examples

```
import "std/c/mlentropy"  
use mlentropy
```

```
create result = entrSum(/* args */)   
say result
```

```
create result = entrMean(/* args */)   
say result
```

```
create result = entrMin(/* args */)   
say result
```

```
create result = entrMax(/* args */)   
say result
```

```
create result = entrVar(/* args */)   
say result
```

```
create result = entrStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/mlentropy"`` at the top of your file.
- Run ``afriLang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module mlentropy

```
function entrSum(v list number) returns number
end
```

```
function entrMean(v list number) returns number
end
```

```
function entrMin(v list number) returns number
end
```

```
function entrMax(v list number) returns number
end
```

```
function entrVar(v list number) returns number
end
```

```
function entrStd(v list number) returns number
end
```

```
function entrNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/mlentropy"`
- Vérification : `afriLang check`
- Documentation : <https://afriLang.dev/stdlib/std/c/mlentropy/>

Source (extrait)

```
module mlentropy

function entrSum(v list number) returns number
end

function entrMean(v list number) returns number
```

```
end

function entrMin(v list number) returns number
end

function entrMax(v list number) returns number
end

function entrVar(v list number) returns number
end

function entrStd(v list number) returns number
end

function entrNorm(v list number) returns list number
end
end
```
