

AFRILANG Stdlib

std/c/mltfidf

Français. Bibliothèque AFRILANG 'std/c/mltfidf' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : tfidSum, tfidMean, tfidMin, tfidMax, tfidVar, tfidStd, tfidNorm.

```
'import "std/c/mltfidf"' · 'use mltfidf'
```

```
- 'tfidSum(v list number) → number' - 'tfidMean(v list number) → number' - 'tfidMin(v list number) → number' - 'tfidMax(v list number) → number' - 'tfidVar(v list number) → number' - 'tfidStd(v list number) → number' - 'tfidNorm(v list number) → list number'
```

English. AFRILANG library 'std/c/mltfidf' (tier complex, category complex). Exports 7 function(s): tfidSum, tfidMean, tfidMin, tfidMax, tfidVar, tfidStd, tfidNorm.

```
'import "std/c/mltfidf"' · 'use mltfidf'
```

```
- 'tfidSum(v list number) → number' - 'tfidMean(v list number) → number' - 'tfidMin(v list number) → number' - 'tfidMax(v list number) → number' - 'tfidVar(v list number) → number' - 'tfidStd(v list number) → number' - 'tfidNorm(v list number) → list number'
```

Contents

Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/mltfidf' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : tfidSum, tfidMean, tfidMin, tfidMax, tfidVar, tfidStd, tfidNorm.

'import "std/c/mltfidf"' · 'use mltfidf'

```
- `tfidSum(v list number) → number`
- `tfidMean(v list number) → number`
- `tfidMin(v list number) → number`
- `tfidMax(v list number) → number`
- `tfidVar(v list number) → number`
- `tfidStd(v list number) → number`
- `tfidNorm(v list number) → list number`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/mltfidf"
use mltfidf
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- tfidSum(v list number) → number•
tfidMean(v list number) → number•
tfidMin(v list number) → number•
tfidMax(v list number) → number•
tfidVar(v list number) → number•
tfidStd(v list number) → number•
tfidNorm(v list number) → list

4. Exemples d'utilisation

```
import "std/c/mltfidf"
use mltfidf
```

```
create result = tfidSum(/* args */)
say result
```

```
create result = tfidMean(/* args */)
say result
```

```
create result = tfidMin(/* args */)
say result
```

```
create result = tfidMax(/* args */)
say result
```

```
create result = tfidVar(/* args */)
say result
```

```
create result = tfidStd(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/mltfidf"`` en tête de fichier.
- Lancez ``afrilang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module mltfidf

```
function tfidSum(v list number) returns number
end
```

```
function tfidMean(v list number) returns number
end
```

```
function tfidMin(v list number) returns number
end
```

```
function tfidMax(v list number) returns number
end
```

```
function tfidVar(v list number) returns number
end
```

```
function tfidStd(v list number) returns number
end
```

```
function tfidNorm(v list number) returns list number
end
end
```

English

1. Overview

AFRILANG library 'std/c/mltfidf' (tier complex, category complex). Exports 7 function(s): tfidSum, tfidMean, tfidMin, tfidMax, tfidVar, tfidStd, tfidNorm.

'import "std/c/mltfidf"' · 'use mltfidf'

```
- `tfidSum(v list number) → number`
- `tfidMean(v list number) → number`
- `tfidMin(v list number) → number`
- `tfidMax(v list number) → number`
- `tfidVar(v list number) → number`
- `tfidStd(v list number) → number`
- `tfidNorm(v list number) → list number`
```

2. Installation & import

Add the module to your program:

```
import "std/c/mltfidf"
use mltfidf
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- tfidSum(v list number) → number•
tfidMean(v list number) → number•
tfidMin(v list number) → number•
tfidMax(v list number) → number•
tfidVar(v list number) → number•
tfidStd(v list number) → number•
tfidNorm(v list number) → list

4. Usage examples

```
import "std/c/mltfidf"
use mltfidf
```

```
create result = tfidSum(/* args */)
say result
```

```
create result = tfidMean(/* args */)
say result
```

```
create result = tfidMin(/* args */)
say result
```

```
create result = tfidMax(/* args */)
say result
```

```
create result = tfidVar(/* args */)
say result
```

```
create result = tfidStd(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/mltfidf"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

```
module mltfidf
```

```
function tfidSum(v list number) returns number
end
```

```
function tfidMean(v list number) returns number
end
```

```
function tfidMin(v list number) returns number
end
```

```
function tfidMax(v list number) returns number
end
```

```
function tfidVar(v list number) returns number
end
```

```
function tfidStd(v list number) returns number
end
```

```
function tfidNorm(v list number) returns list number
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/mltfidf"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/mltfidf/>
