1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/netmac' (niveau complex, catégorie complex). Elle expose 7 fonction(s) : macLen, macUpper, macLower, macTrim, macSplit, macJoin, macReplace.

```
'import "std/c/netmac"' · 'use netmac'
```

```
- `macLen(s text) → number`
- `macUpper(s text) → text`
- `macLower(s text) → text`
- `macTrim(s text) → text`
- `macSplit(s text, delim text) → list text`
- `macJoin(parts list text, delim text) → text`
- `macReplace(s text, from text, to text) → text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/netmac"
use netmac
```

Niveau : complex · Catégorie : Modules complex (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- macLen(s text) → number•
macUpper(s text) → text•
macLower(s text) → text•
macTrim(s text) → text•
macSplit(s text, delim text) → list•
macJoin(parts list text, delim text) → text•
macReplace(s text, from text, to text) → text

4. Exemples d'utilisation

```
import "std/c/netmac"
use netmac
```

```
create result = macLen(/* args */)
say result
```

```
create result = macUpper(/* args */)
say result
```

```
create result = macLower(/* args */)
say result
```

```
create result = macTrim(/* args */)
say result
```

```
create result = macSplit(/* args */)
say result
```

```
create result = macJoin(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/netmac"`` en tête de fichier.
- Lancez ``afri-lang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module netmac

```
function macLen(s text) returns number
end
```

```
function macUpper(s text) returns text
end
```

```
function macLower(s text) returns text
end
```

```
function macTrim(s text) returns text
end
```

```
function macSplit(s text, delim text) returns list text
end
```

```
function macJoin(parts list text, delim text) returns text
end
```

```
function macReplace(s text, from text, to text) returns text
end
end
```

English

1. Overview

AFRILANG library 'std/c/netmac' (tier complex, category complex). Exports 7 function(s): macLen, macUpper, macLower, macTrim, macSplit, macJoin, macReplace.

```
'import "std/c/netmac"' · 'use netmac'
```

```
- `macLen(s text) → number`  
- `macUpper(s text) → text`  
- `macLower(s text) → text`  
- `macTrim(s text) → text`  
- `macSplit(s text, delim text) → list text`  
- `macJoin(parts list text, delim text) → text`  
- `macReplace(s text, from text, to text) → text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/netmac"  
use netmac
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- macLen(s text) → number•
macUpper(s text) → text•
macLower(s text) → text•
macTrim(s text) → text•
macSplit(s text, delim text) → list•
macJoin(parts list text, delim text) → text•
macReplace(s text, from text, to text) → text

4. Usage examples

```
import "std/c/netmac"  
use netmac
```

```
create result = macLen(/* args */)   
say result
```

```
create result = macUpper(/* args */)   
say result
```

```
create result = macLower(/* args */)   
say result
```

```
create result = macTrim(/* args */)   
say result
```

```
create result = macSplit(/* args */)   
say result
```

```
create result = macJoin(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/netmac"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module netmac

```
function macLen(s text) returns number
end
```

```
function macUpper(s text) returns text
end
```

```
function macLower(s text) returns text
end
```

```
function macTrim(s text) returns text
end
```

```
function macSplit(s text, delim text) returns list text
end
```

```
function macJoin(parts list text, delim text) returns text
end
```

```
function macReplace(s text, from text, to text) returns text
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/netmac"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/netmac/>

Source (extrait)

```
module netmac

function macLen(s text) returns number
end

function macUpper(s text) returns text
```

```
end

function macLower(s text) returns text
end

function macTrim(s text) returns text
end

function macSplit(s text, delim text) returns list text
end

function macJoin(parts list text, delim text) returns text
end

function macReplace(s text, from text, to text) returns text
end
end
```
