Français

1. Vue d'ensemble

Bibliothèque AFRILANG 'std/c/nlpkeyword' (niveau complexe, catégorie complexe). Elle expose 7 fonction(s) : `keywLen`, `keywUpper`, `keywLower`, `keywTrim`, `keywSplit`, `keywJoin`, `keywReplace`.

'import "std/c/nlpkeyword"' · 'use nlpkeyword'

```
- `keywLen(s text) → number`
- `keywUpper(s text) → text`
- `keywLower(s text) → text`
- `keywTrim(s text) → text`
- `keywSplit(s text, delim text) → list text`
- `keywJoin(parts list text, delim text) → text`
- `keywReplace(s text, from text, to text) → text`
```

2. Installation & import

Ajoutez le module à votre programme :

```
import "std/c/nlpkeyword"
use nlpkeyword
```

Niveau : complexe · Catégorie : Modules complexe (c/)
Domaines avancés – graphes, NLP, réseaux complexes.

3. Référence API

- `keywLen(s text) → number`•
`keywUpper(s text) → text`•
`keywLower(s text) → text`•
`keywTrim(s text) → text`•
`keywSplit(s text, delim text) → list`•
`keywJoin(parts list text, delim text) → text`•
`keywReplace(s text, from text, to text) → text`

4. Exemples d'utilisation

```
import "std/c/nlpkeyword"
use nlpkeyword
```

```
create result = keywLen(/* args */)
say result
```

```
create result = keywUpper(/* args */)
say result
```

```
create result = keywLower(/* args */)
say result
```

```
create result = keywTrim(/* args */)
say result
```

```
create result = keywSplit(/* args */)
say result
```

```
create result = keywJoin(/* args */)
say result
```

5. Bonnes pratiques

- Préférez ``import "std/c/nlpkeyword"`` en tête de fichier.
- Lancez ``afriLang check`` avant de livrer.
- Combinez avec les modules stdlib de la même catégorie.
- Voir `/stdlib/` pour le source live et les démos playground.
- Signalez les problèmes sur GitHub si une export manque.

6. Annexe — source

module nlpkeyword

```
function keywLen(s text) returns number
end
```

```
function keywUpper(s text) returns text
end
```

```
function keywLower(s text) returns text
end
```

```
function keywTrim(s text) returns text
end
```

```
function keywSplit(s text, delim text) returns list text
end
```

```
function keywJoin(parts list text, delim text) returns text
end
```

```
function keywReplace(s text, from text, to text) returns text
end
end
```

English

1. Overview

AFRILANG library 'std/c/nlpkeyword' (tier complex, category complex). Exports 7 function(s): keywLen, keywUpper, keywLower, keywTrim, keywSplit, keywJoin, keywReplace.

'import "std/c/nlpkeyword"' · 'use nlpkeyword'

```
- `keywLen(s text) → number`
- `keywUpper(s text) → text`
- `keywLower(s text) → text`
- `keywTrim(s text) → text`
- `keywSplit(s text, delim text) → list text`
- `keywJoin(parts list text, delim text) → text`
- `keywReplace(s text, from text, to text) → text`
```

2. Installation & import

Add the module to your program:

```
import "std/c/nlpkeyword"
use nlpkeyword
```

Tier: complex · Category: Complex modules (c/)
Advanced domains – graphs, NLP, complex networks.

3. API reference

- keywLen(s text) → number•
keywUpper(s text) → text•
keywLower(s text) → text•
keywTrim(s text) → text•
keywSplit(s text, delim text) → list•
keywJoin(parts list text, delim text) → text•
keywReplace(s text, from text, to text) → text

4. Usage examples

```
import "std/c/nlpkeyword"
use nlpkeyword
```

```
create result = keywLen(/* args */)
say result
```

```
create result = keywUpper(/* args */)
say result
```

```
create result = keywLower(/* args */)
say result
```

```
create result = keywTrim(/* args */)
say result
```

```
create result = keywSplit(/* args */)
say result
```

```
create result = keywJoin(/* args */)
say result
```

5. Best practices

- Prefer ``import "std/c/nlpkeyword"`` at the top of your file.
- Run ``afrilang check`` before shipping.
- Combine with related stdlib modules from the same category.
- See `/stdlib/` for the live source and playground demos.
- Report issues on GitHub if an export is missing or undocumented.

6. Appendix — source

module nlpkeyword

```
function keywLen(s text) returns number
end
```

```
function keywUpper(s text) returns text
end
```

```
function keywLower(s text) returns text
end
```

```
function keywTrim(s text) returns text
end
```

```
function keywSplit(s text, delim text) returns list text
end
```

```
function keywJoin(parts list text, delim text) returns text
end
```

```
function keywReplace(s text, from text, to text) returns text
end
end
```

Référence rapide / Quick reference

- Import : `import "std/c/nlpkeyword"`
- Vérification : `afrilang check`
- Documentation : <https://afrilang.dev/stdlib/std/c/nlpkeyword/>

Source (excerpt)

```
module nlpkeyword

function keywLen(s text) returns number
end

function keywUpper(s text) returns text
end

function keywLower(s text) returns text
end

function keywTrim(s text) returns text
end

function keywSplit(s text, delim text) returns list text
end

function keywJoin(parts list text, delim text) returns text
end

function keywReplace(s text, from text, to text) returns text
end
end
